Pesticides; Draft Guidance and Proposed Method for Antimicrobial Product Efficacy Claims Against Planktonic *Legionella Pneumophila* in Cooling Tower Water; Notice of Availability and Request for Comments

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is announcing the availability of and soliciting public comment on a draft guidance document and proposed method for adding efficacy claims to antimicrobial products for use in cooling tower water to reduce the level of planktonic *Legionella pneumophila*. The draft guidance document describes efficacy testing for antimicrobial products to support claims for the reduction of planktonic *L. pneumophila* in water within cooling tower systems and how to prepare an application for registration. The proposed method is for evaluating the efficacy of antimicrobial products in water of cooling towers against planktonic *L. pneumophila*. The draft guidance does not address adherent or sessile bacteria that attach to a surface (e.g., biofilm) of the cooling tower system or any other microorganism other than *L. pneumophila* which may be found in the water of cooling tower systems.

DATES: Comments must be received on or before December 1, 2023.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general; although this action may be of particular interest to those persons who are or may be required to conduct efficacy testing of chemical substances under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. II. Background

Legionella pneumophila is a bacterium that is often identified as the causative agent of Legionnaires' Disease, which is a disease acquired by inhaling water droplets contaminated with *Legionella* bacteria. *Legionellae* are found naturally in freshwater environments but can become a health

concern when they grow and spread in human-made building water systems like cooling towers. Cooling towers are a potential breeding ground for *L. pneumophila* and subsequent aerosolization of *L. pneumophila* can occur if cooling towers are not properly disinfected and maintained. Following a Legionnaires' disease outbreak in New York City in 2015, New York State began requiring cooling towers to be registered with the state and monitored and treated for *L. pneumophila*. However, EPA currently does not have guidance providing a framework for those seeking to register antimicrobial products with public health claims to reduce *Legionella* in cooling tower water. EPA received requests to develop a test method and guidance for registration of antimicrobial products intended to reduce *L. pneumophila* in water used in cooling tower systems. There is significant interest from stakeholders and the public in the availability of antimicrobial products with these claims.

III. Guidance Documents Do Not Contain Binding Requirements

As guidance, these documents are not binding on the Agency or any outside parties, and the Agency may depart from these documents where circumstances warrant and without prior notice. While EPA has made every effort to ensure the accuracy of the discussion in the guidance, the obligations of EPA and the regulated community are determined by statutes, regulations, or other legally binding documents. In the event of a conflict between the discussion in the guidance documents and any statute, regulation, or other legally binding document, the guidance documents will not be controlling.
