

Answer: The Coast Guard will merge datasets if both the historic and proposed forms are used.

In addition to the above comments submitted to the docket, the following comments and questions were received by Coast Guard program staff members:

Comment (14): Is this just the periodic request to approve the continuation of the collection of registration data?

Answer: Yes.

Comment (15): Has the Notice been issued primarily (at this time) as part of the process to get OMB to issue a control number?

Answer: Yes.

Comment (16): Is this in preparation for collection of registration data under the “new” vessel terms authorized by the Final Rule on State Numbering System (SNS), Vessel Identification System (VIS), and Boating Accident Report Database (BARD) (eff. Jan 2017)?

Answer: Yes. This form makes use of the “primary operation” and “vessel type” in 33 Code of Federal Regulation 174.19.

Comment (17): Is there a revised collection form that will accompany it?

Answer: Yes. There is a revised collection form that is greatly simplified. The proposed revision provides instructions, a breakdown of recreational vessel types by motorization and length category, a breakdown of commercial vessel types, and an administration section.

Comment (18): Will there be any other supporting documentation posted to regulations.gov for this Notice?

Answer: Yes. The Coast Guard posted additional files to docket USCG–2014–0173, including the proposed registration form and supporting statement.

Comment (19): A commenter questioned the Coast Guard’s response to previously submitted comment (6) in which the Coast Guard noted a reduced reporting burden with the revised form. The commenter noted that the burden is not reduced since collecting aspects of vessels such as hull material and engine type are already required under 33 CFR 174 even if statistics regarding these aspects are not required on form CGHQ–3923.

Answer: The burden of filling out the revised form is reduced. On the previous version of CGHQ–3923, the Coast Guard required statistics on over 150 data points whereas the proposed version of the form requires only 69. The previous version requested information on five variables (vessel type, hull material, length, engine type, and use) whereas the proposed version requires only three variables (vessel type, length, primary operation). The

Coast Guard expects a reduced burden as the proposed form will require fewer queries and fewer data point checks to complete it.

Comment (20): A commenter questioned why aspects of vessels such as hull material and engine type are necessary in 33 CFR 174 since they are not required elements to be reported on form CGHQ–3923.

Answer: Various aspects of vessels are required to be collected for law enforcement purposes. Even though various vessel aspects such as hull material and engine type are not on the proposed form CGHQ–3923, they are used in accident, theft, and fraud investigations. Using common terminology facilitates common understanding.

Comment (21): A commenter noted that hull material and engine type are of interest to sectors and should be on form CGHQ–3923 since information on them cannot be obtained outside of CGHQ–3923.

Answer: The Coast Guard works with various sectors including government, industry, non-profits, and researchers. If a party requested information other than what is available on CGHQ–3923, the Coast Guard would direct the user to a more appropriate contact.

Comment (22): A commenter provided a recommended version of CGHQ–3923 that is a modification of the previous CGHQ–3923. It includes additional hull material entries, an additional engine type, and changes the names of some categories.

Answer: The Coast Guard thanks the commenter for the suggested form but maintains a desire to have a simplified form for use by the States. The Coast Guard has not used the hull material or engine information collected previously. Because we have not used the data, we removed it from the form so as to reduce the burden of data reporting on the States.
