

mobile fishing gear, and close these areas to bottom trawling;

“4. Monitor bycatch to identify areas of deep-sea coral and sponge habitat that are currently fished, establish appropriate limits or caps on bycatch of deep-sea coral and sponge habitat, and immediately close areas to bottom trawling where these limits or caps are reached, until such time as the areas can be mapped, identified as EFH and HAPC, and permanently protected;

“5. Establish a program to identify new areas containing high concentrations of deep-sea coral and sponge habitat through bycatch monitoring, surveys, and other methods, designate these newly discovered areas as EFH and HAPC, and close them to bottom trawling;

“6. Enhance monitoring infrastructure, including observer coverage, vessel monitoring systems, and electronic logbooks for vessel fishing in areas where they might encounter high concentrations of deep-sea coral and sponge habitat (including encountering HAPC);

“7. Increase enforcement and penalties to prevent deliberate destruction of deep-sea coral and sponge habitat and illegal fishing in already closed areas; and

“8. Fund and initiate research to identify, protect, and restore damaged deep-sea coral and sponge habitat.”

The exact and complete assertions of legal responsibilities under Federal law are contained in the text of Oceana's petition, which is available via internet at the following NMFS web address: http://www.nmfs.noaa.gov/habitat/habitatconservation/DSC_petition/Oceana. Also, anyone may obtain a copy of this petition by contacting NMFS at the above address.

The Assistant Administrator for Fisheries, NOAA has determined that the petition contains enough information to enable NMFS to consider the substance of the petition. NMFS will consider public comments received in determining whether to proceed with the development of the regulations requested by Oceana. Additionally, NMFS, by separate letter, has requested each Regional Fishery Management Council assist in evaluating this petition. Upon determining whether to initiate the requested rulemaking, the Assistant Administrator for Fisheries, NOAA, will publish in the **Federal Register** a notice of the agency's final disposition of the Oceana petition request.

Permit Application Received.

Michael Clarke has applied for a permit to take the South Central California Coast Evolutionarily Significant Unit of steelhead trout (*Oncorhynchus mykiss*) and tissue collection from this species during a 2-year study (2004 and 2005) of the abundance and distribution of juvenile steelhead in the San Luis Obispo Creek watershed, San Luis Obispo County, California. Michael Clarke proposes electrofishing and direct underwater observation using mask and snorkel as the methods for estimating abundance and distribution of juvenile steelhead, and has requested an annual non-lethal take of 1620 juvenile steelhead, and annual collection and possession of up to 100 juvenile steelhead tissue samples, with the total possession for both years not exceeding 200 tissue samples. The proposed research would conclude October 31, 2005.
