### Background and Purpose

The U.S. implemented the Clean Air Act, Title 42 of the U.S. Code, Chapter 85, and the Act to Prevent Pollution from Ships, 33 U.S.C. 1905–1915, by promulgating regulations for ship air emissions in Title 40, Protection of Environment, sections 50–99 of the Code of Federal Regulations and ratifying the International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 (MARPOL) Annex VI. These regulations require the reduction of nitrous oxides (NO<sub>x</sub>), sulfur oxides (SO<sub>x</sub>), and particulate matter (PM) emissions from ships. Additionally, the U.S. has established an emission control area (ECA) for the U.S. under MARPOL Annex VI that further limits NO<sub>x</sub> and SO<sub>x</sub> emissions from ships. Title 40 of the Code of Federal Regulations and MARPOL Annex VI apply to both new and existing ships and will require the commercial maritime industry to implement new technology that will reduce NO<sub>x</sub>, SO<sub>x</sub> and PM emissions from all ships.

In developing the ship air emission regulations, the Coast Guard and the Environmental Protection Agency worked with industry and other stakeholders to identify and evaluate emission control technology for ships.<sup>1</sup> At this time, the Coast Guard and the Environmental Protection Agency seek additional information about new and existing technology for reducing these air emissions from cargo or passenger

vessels subject to Title 40 of the Code of Federal Regulations and/or MARPOL Annex VI. It also seeks to identify impediments, including any laws or regulations, to implementing this technology.

We are particularly interested in information that includes details about:

—Data and analysis from the maritime community concerning the state of their air emission reduction technologies;

—The technology relating to after-treatment systems, alternative fuels, advanced engine design, auxiliary equipment, and other pertinent processes;

—The projected or measured percent reduction of air emissions achieved from specific equipment;

—Any adverse impacts, safety implications, or any system integration effects with other shipboard equipment;

—Potential capital and operating costs or savings of the equipment’s implementation.

Please consider the following questions when responding to this notice:

(A) What new technology exists for reducing air emissions from cargo or passenger ships?

(B) What is the availability of such technology?

(C) What methods or equipment are currently under development that may be able to meet the MARPOL Annex VI requirements?

(D) Are methods or equipment being applied for similar purposes in other transportation modes or industries (e.g., military, rail, over-the-road truck industries, manufacturing, power) that merit investigation for use aboard vessels?
