

intersection of State Trunk Highway 89 and U.S. Highway 18.

Construction equipment would include graders, bulldozers, excavators, forklifts, trailers, plows, trenchers, pile drivers, and directional boring rigs. Vehicles for transporting construction materials and components primarily would be legal load over-the-road flatbed and box trucks. Transport would use existing regional roads, bridges, and intersections. Laydown areas would be established within the Project site. Internal site access roads would be required. The solar facility would be interconnected to the transmission grid through the existing ATC substation located to the northeast of the proposed substation and would require a short 138 kilovolt (kV) overhead line between the two stations. Laydown areas and a Laydown Yard would be established within the Project site. Fencing would be placed around contiguous blocks of solar arrays.

Potential locations for development of the solar facility in Wisconsin were evaluated in an initial preliminary site review to identify locations where electric transmission infrastructure would be sufficient to connect a solar project to the power grid. The Site Selection Study consisted of three phases of evaluation which began with 18 potential sites and ended with the identification of the 1,200 acre proposed site in Jefferson County as the most feasible alternative for detailed evaluation in the EIS because it best meets the purpose and need and minimizes or mitigates potential impacts.

RUS is authorized to make loans and loan guarantees that finance the construction of the Badger State Solar Alternating Current Project. RUS is responsible for completing the environmental review process in processing Badger State Solar's application. RUS is serving as the lead Federal agency, as defined at 40 CFR1501.5, for preparation of the FEIS.

The proposed Project is subject to the jurisdiction of Public Service Commission of Wisconsin (PSCW), Wisconsin Department of Natural Resources (WDNR), Wisconsin State Historical Society of Historic Preservation Office (SHPO), Wisconsin Department of Transportation (WisDOT), and State of Wisconsin Division of Safety and Buildings. PSCW and WDNR are responsible for coordination of environmental reviews for compliance with the Wisconsin Environmental Policy Act (WEPA). PSCW and WDNR must comply with WEPA when reviewing proposed energy construction projects, including electric

generating and transmission projects seeking PSCW statutory approval. WEPA applies only to actions of state agencies. However, the environmental impact of the proposed Project was reviewed by PSCW, in coordination with WDNR, as part of the application for a Certificate of Public Convenience and Necessity (CPCN). PSCW issued an Order approving the CPCN application subject conditions issued in the Final Decision on February 26, 2020 (Docket 9800-CE-100).

RUS has prepared the FEIS to analyze the impacts of its respective Federal actions and the proposed Project in accordance with the National Environmental Policy Act of 1969 (NEPA), as amended (42 United States Code [U.S.C.] 4321 *et seq.*), Council on Environmental Quality (CEQ) regulations for implementing the procedural provisions of NEPA (40 Code of Federal Regulations [CFR] part 1500 *et seq.*), and Rural Utilities Service (RUS), Environmental Policies and Procedures (7 CFR part 1970 *et seq.*). RUS has prepared and published a DEIS which can be found on the RUS and Badger State Solar websites (<https://www.rd.usda.gov/resources/environmental-studies/impact-statements>, <https://badgerstatesolar.consultation.ai>, and <https://www.badgerstatesolar.com>).

RUS evaluated the potential impacts of the proposed Project on environmental resources. The analysis determined that there would be no impact or minor adverse impacts on soils and geology, air quality, acoustic environment (noise), water resources (including groundwater and surface water), biological resources (including vegetation, wetlands, riparian areas, floodplains, wildlife, fisheries and aquatic resources, and threatened and endangered species), land resources (including prime farmlands), visual resources, farm transportation, cultural resources and historic properties, public health and safety, and socioeconomics and environmental justice associated with the proposed Project. Badger State Solar would implement mitigation measures as necessary and appropriate to minimize adverse impacts. There would be potential beneficial effects on soils, water resources, air quality, and socioeconomics. Unavoidable adverse effects related to proposed Project operations would last only as long as the useful life of the solar facility (an expected 40 years). Implementation of the proposed Project would not result in significant unavoidable adverse impacts, irreversible or irretrievable commitment of resources, or in permanent losses to maintenance or

enhancement of long-term productivity of the environment. When the incremental effects from the proposed Project are considered together with other past, present, and reasonably foreseeable future actions, there would be no cumulative adverse impact.

This Notice of Availability also serves as a notice of proposed wetland and floodplain actions. It is anticipated that there will be no permanent wetland impacts and no significant direct or indirect impacts to floodplains. The proposed Project was planned to avoid and minimize impacts to wetlands and waterways to the extent practicable during the site selection and design phase of the Project. Throughout the Project, best management practices (BMPs) (e.g., silt fences, hand-clearing of vegetation where necessary, etc.) will be implemented to minimize soil disturbance in or near wetlands and jurisdictional streams, and BMPs in accordance with requirements of the Project's Sediment and Erosion Control Plan and stormwater pollution prevention plan would be followed. Temporary impacts to wetlands would be permitted in accordance with United States Army Corps of Engineers and state requirements. The proposed Project also has been designed to avoid impacts to sensitive floodplains; there are no floodplains present within the Project boundary.
