## SUPPLEMENTARY INFORMATION:

## Background

The world of commercial information technology resources ("IT") is constantly changing and innovating to improve the daily lives of businesses, their employees, and their customers. This pace can often result in unanticipated obsolescence, necessitating review of an organization's already implemented solutions. For the Postal Service, legal processes and notice required by the Privacy Act present additional challenges, as new technologies will require further review for possible compliance issues to meet statutory and regulatory requirements.

To better meet the changing technology world, the Postal Service will consolidate existing Systems of Records ("SOR"s) covering IT into three new, comprehensive Systems of Records. These SORs will work in tandem, with each individual SOR covering a specific group of related functions, and all three SORs working together to support a seamless technology experience.

These SORs, generally, will cover the following three areas:

- Infrastructure, covering records created for use throughout the entirety of a particular IT resource in addition to covering the records created from the usage of those records by users and applications.
- Applications, covering records created through the regular use of an application.
- Administrative, covering records created for monitoring and administration of users and applications within an IT resource.

In addition to covering these three areas generally, the Postal Service will look ahead in an effort to include possible future technology solutions within this System of Records. This will give the Postal Service flexibility to more easily adapt to the advancing pace of information technology and to better fulfill its service obligations. This will also provide transparency into the collection of records relating to commercial IT, allowing Postal employees, contractors, and the public to more easily identify what we do with their information.

# Rationale for the Creation of a New USPS System of Records

Currently, records relating to the implementation of IT resources are housed primarily in USPS 500.000, Property Management Records, with other IT-related components appearing in 890.000, Sales, Marketing, Events, and Publications, and other SORs. SOR 500.000 reflects not only IT access records, but also building access and related records. This results in a mixture of uses within SOR 500.000, which reduces optimization and can result in confusion.

The creation of a new SOR to encompass commercial IT resources, therefore, provides a platform which is easy to understand and allows for greater flexibility in use and maintenance. Since the new SOR will house only IT resources, the public can more easily understand what information is collected and how it is used.

Further, documenting IT records within one SOR provides for greater flexibility in adding new resources as well as maintaining existing resources. For example, one application may already collect and store, for the same purpose, data elements that a new application will use. With a record already documented, the implementation process of the new technology will be streamlined while also meeting statutory and regulatory mandates.

## Description of New or Modified System of Records

This new System of Records is being developed to support the implementation of various commercial IT resources and to provide support for future implementations.

This system specifically will cover categories of records referred to collectively as "Administrative." Categories of Records in this system reference data elements created from a user or application's interactions with other applications. Applications covered in this SOR reference or incorporate data elements otherwise documented in USPS 550.000 Commercial Information Technology Resources-Infrastructure; therefore, they will not be specifically documented here unless this system references a transformative use of that element.

This System of Records may overlap with elements appearing in other Systems of Records, as indicated in the Rationale for Changes to USPS System of Records section. This new System of Records will encompass commercially developed or commercially assisted IT resources. Applications developed inhouse or by the Postal Service, such as Informed Delivery®, will still be represented in their own SOR.

#### SUPPLEMENTARY INFORMATION:

#### **Background**

The world of commercial information technology resources ("IT") is constantly changing and innovating to improve the daily lives of businesses, their employees, and their customers. This pace can often result in unanticipated obsolescence, necessitating review of an organization's already implemented solutions. For the Postal Service, legal processes and notice required by the Privacy Act present additional challenges, as new technologies will require further review for possible compliance issues to meet statutory and regulatory requirements.

To better meet the changing technology world, the Postal Service will consolidate existing Systems of Records ("SOR"s) covering IT into three new, comprehensive Systems of Records. These SORs will work in tandem, with each individual SOR covering a specific group of related functions, and all three SORs working together to support a seamless technology experience.

These SORs, generally, will cover the following three areas:

• Infrastructure, covering records created for use throughout the entirety of a particular IT resource in addition to covering the records created from the usage of those records by users and applications.
