NUCLEAR REGULATORY COMMISSION

[Docket No. 50-213]

Connecticut Yankee Atomic Power Company; Haddam Neck Plant; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (NRC) is considering issuance of an amendment to Facility Operating License No. DPR-61 issued to Connecticut Yankee Atomic Power Company (the licensee) for the Haddam Neck Plant, a permanently shutdown nuclear reactor facility located in Middlesex County, Connecticut. The new license condition is related to the licensee's proposed License Termination Plan (LTP) for the plant. Therefore, pursuant to Section 51.21 of Title 10 of the Code of Federal Regulations (10 CFR), the NRC is issuing this environmental assessment and finding of no significant impact.

Environmental Assessment

Identification of the Proposed Action

The proposed action would amend Facility Operating License No. DPR-61 to approve the LTP for the plant and add a new License Condition C.7 to the LTP for the plant. The proposed condition will require the licensee to implement and maintain in effect all provisions of the LTP that are approved by the NRC as part of the amendment. The proposed condition would also (1) provide criteria for the licensee to make changes to the LTP with prior NRC review and approval and (2) require the licensee to perform a capture zone analysis and to have assured that the groundwater contribution is included for all applicable survey areas. In accordance with the regulations, the licensee has, and will continue to have, the authority to remediate the site without an approved LTP, which is performed under the provisions of 10 CFR 50.82(a)(6) and 50.59. The proposed license amendment does not authorize additional plant activities beyond those that are already authorized and, therefore, is administrative.
