Upcoming Sunset Reviews for April 2010

The following Sunset Reviews are scheduled for initiation in April 2010 and will appear in that month's Notice of Initiation of Five-Year Sunset Reviews.

SUPPLEMENTARY INFORMATION:

I. Abstract

The scale and catch weighing requirements address performance standards designed to ensure that all catch delivered to the processor is accurately weighed and accounted for. Scale and catch-weighing monitoring is required for Western Alaska Community Development Quota Program (CDQ) catcher/processors, American Fisheries Act (AFA) catcher/processors, AFA motherships, AFA shoreside processors and stationary floating processors, non-AFA trawl catcher/processors regulated under the annual Groundfish Retention Standard, and Crab Rationalization crab catcher/processors and Registered Crab Receivers.

National Marine Fisheries Service (NMFS) has identified three primary objectives for monitoring catch. First, monitoring must ensure independent verification of catch weight, species composition, and location data for every delivery by a catcher vessel or every pot by a catcher/processor. Second, all catch must be weighed accurately using NMFS-approved scales to determine the weight of total catch. Third, the system must provide a verifiable record of the weight of each delivery. In addition, operators of these vessels must ensure that each haul is observed by a NMFS-

approved observer for verification that all fish are weighed. To effectively manage fisheries, NMFS must have data that will provide reliable independent estimates of the total catch.

The catch weighing and monitoring system developed by NMFS for catcher/processors and motherships is based on the vessel meeting a series of design criteria. Because of the wide variations in factory layout for inshore processors, NMFS requires a performance-based catch monitoring system for inshore processors.
