Total Annual Burden Hours: 46,037.

Needs and Uses: The National Marine

Fisheries Services (NMFS), Alaska

Regional Office, is requesting extension

of the currently approved information

collection for Alaska Region Scale &

Catch Weighing Requirements.

The Magnuson-Stevens Fishery

Conservation and Management Act, 16

U.S.C. 1801 *et seq.* (Magnuson-Stevens

Act) authorizes the North Pacific

Fishery Management Council to prepare

and amend fishery management plans

for any fishery in waters under its

jurisdiction.

The At-Sea Scales Program was

developed in response to the need for

catch accounting methods that were

more precise and verifiable at the level

of the individual haul and less

dependent on estimates generated by at-

sea observers. This was necessary due to

the implementation of large-scale catch

share programs that required NMFS to

provide verifiable and defensible

estimates of quota harvest. Scale and

catch-weighing monitoring is required

for Western Alaska Community

Development Quota Program (CDQ)

catcher/processors (C/Ps), American

Fisheries Act (AFA) C/Ps, AFA

motherships, AFA shoreside processors

and stationary floating processors,

Central Gulf of Alaska Rockfish Program

trawl C/Ps, non-AFA trawl C/Ps

participating in Bering Sea and Aleutian

Islands (BSAI) trawl fisheries, and longline C/Ps participating in BSAI Pacific cod fisheries. Scale and catch weighing requirements are located at 50 CFR parts 679 and 680.

NMFS has identified three primary objectives for monitoring catch to ensure independent and verifiable data is available for fisheries management. First, monitoring methods must ensure all catch delivered to a processor is weighed and identified to species and provide a verifiable record of the weight and species composition of each delivery. Second, all catch must be weighed using NMFS-approved scales to determine the weight of the catch and provide a record of that weight. Third, monitoring systems, such as video, must be in place to ensure that all catch is accounted for.

Shoreside processors participating in catch share programs have many of the same catch accounting and monitoring goals, but two differences require unique monitoring tools to obtain precise and verifiable catch amounts for quota management. First, shoreside processors vary more in size, facilities, and layout than do catcher/processors or motherships. Second, the State of Alaska is responsible for approving scales used for trade by shoreside processors and has developed an effective program for their inspection and approval.

Because of the wide variations in factory layout, a performance-based catch monitoring system is more appropriate for shoreside processors than a type approval process used for at-sea scales. CMCPs (Catch Monitoring and Control Plans) and CMPs (Crab Monitoring Plans) are submitted by the representative from the shoreside processor and approved by NMFS. CMCPs and CMPs detail a series of performance based standards set out in regulation that ensure that all delivered catch can be effectively monitored by NMFS-authorized personnel, that NMFS-authorized personnel can effectively conduct their monitoring duties, and that all catch is accurately sorted and weighed by species.

Vessels that participate in halibut deck sorting are required to comply with additional monitoring and equipment requirements such as the installation of an observer sampling station on deck and video monitoring requirements. These additional measures are necessary to ensure accurate accounting of halibut sorted on the deck of participating vessels.

Affected Public: Business or other for-profit organizations.

Frequency: Annually; daily, for time period.

Respondent's Obligation: Required to Obtain or Retain Benefits.
