BILLING CODE 4333–15–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 660

[Docket No. 230919–0225]

RIN 0648–BM44

Fisheries Off West Coast States; Coastal Pelagic Species Fisheries; Biennial Specifications; 2023–2024 and 2024–2025 Specifications for Pacific Mackerel

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule.

SUMMARY: NMFS proposes to implement allowable catch levels, an overfishing limit, an allowable biological catch, and an annual catch limit for Pacific mackerel in the exclusive economic zone off the U.S. West Coast (California, Oregon, and Washington) for the fishing years (seasons) 2023–2024 and 2024–2025. This proposed rule is made pursuant to the Coastal Pelagic Species Fishery Management Plan. The proposed harvest guideline and annual catch target for the 2023–2024 fishing season are 7,871 metric tons (mt) and 6,871 mt, respectively. The proposed harvest guideline and annual catch target for the 2024–2025 fishing season are 8,943 mt and 7,943 mt, respectively. If the fishery attains the annual catch target in either fishing season, the directed fishery will close, reserving the 1,000-mt difference between the harvest guideline and annual catch target as a set-aside for incidental landings in other Coastal Pelagic Species fisheries and other sources of mortality. This rulemaking is intended to conserve and

manage the Pacific mackerel stock off the U.S. West Coast.

DATES: Comments must be received by October 30, 2023.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2023–0085, by any of the following methods:

Electronic Submissions: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <https://www.regulations.gov> and enter NOAA–NMFS–2023–0085 in the Search box. Click on the “Comment” icon, complete the required fields, and enter or attach your comments.

Instructions: Comments sent by any other method or received after the end of the comment period may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on <https://www.regulations.gov> without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT:

Katie Davis, West Coast Region, NMFS, (323) 372–2126, Katie.Davis@noaa.gov.

SUPPLEMENTARY INFORMATION: Under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801 *et seq.*, NMFS manages the Pacific mackerel fishery in the U.S. exclusive economic zone (EEZ) off the West Coast in accordance with the Coastal Pelagic Species (CPS) Fishery Management Plan (FMP). The CPS FMP and its implementing regulations require NMFS to set annual harvest specifications for the Pacific mackerel fishery based on the annual specification framework and control rules in the FMP. The Pacific mackerel fishing season runs from July 1 to June 30. The purpose of this proposed rule is to implement these harvest specifications, which include allowable harvest levels (i.e., annual catch target (ACT) and harvest guideline (HG)), an annual catch limit (ACL), and annual catch reference points (i.e., overfishing limit (OFL) and acceptable biological catch (ABC)). The uncertainty surrounding the current biomass estimates for Pacific mackerel for the 2023–2024 and 2024–2025 fishing seasons was taken into consideration in the development of these harvest specifications. Any Pacific mackerel harvested between July 1, 2023, and the

effective date of the final rule will count toward the 2023–2024 ACT and HG.

During public meetings held every other year, the NMFS Southwest Fisheries Science Center (SWFSC) presents biomass estimates for Pacific mackerel to the Pacific Fishery Management Council's (Council) CPS Management Team (CPSMT), the Council's CPS Advisory Subpanel (CPSAS) and the Council's Scientific and Statistical Committee (SSC), and the biomass estimates and the status of the fisheries are reviewed and discussed. The CPSMT, CPSAS, and SSC then provide recommendations and comments to the Council regarding the calculated OFL, ABC, ACL, HG, and ACT. Following Council review and after hearing public comment, the Council adopts biomass estimates and makes its harvest specification recommendations to NMFS. Pursuant to regulations at 50 CFR 660.508(e), NMFS publishes biennial specifications in the **Federal Register** that establish these allowable harvest levels (i.e., ACT/HG) as well as OFL, ABC, and ACL for the upcoming two Pacific mackerel fishing seasons.

The control rules in the CPS FMP include the HG control rule, which, in conjunction with the OFL and ABC control rules, are used to manage Pacific mackerel. According to the FMP, the quota for the principal commercial fishery, the HG, is determined using the FMP-specified HG formula. The HG is based, in large part, on the estimate of stock biomass for the fishing year. The biomass estimate is an explicit part of the various harvest control rules for Pacific mackerel, and as the estimated biomass decreases or increases from one year to the next, the resulting allowable catch levels similarly trend. The harvest control rule in the CPS FMP is $HG = [(Biomass - Cutoff) \times Fraction \times Distribution]$ with the parameters described as follows:

1. *Biomass.* The estimated stock biomass of Pacific mackerel for the 2023–2024 management season is 55,681 mt. The estimated stock biomass of Pacific mackerel for the 2024–2025 management season is 60,785 mt;

2. *Cutoff.* This is the biomass level below which no commercial fishery is allowed. The FMP establishes this level at 18,200 mt;

3. *Fraction.* The harvest fraction is the percentage of the biomass above 18,200 mt that may be harvested. This is set in the FMP at 30 percent; and

4. *Distribution.* Pacific mackerel range from Mexico to Alaska and regularly migrate between Mexico and the U.S. West Coast. Because some of the Pacific mackerel stock exists outside of U.S.

waters, the Distribution parameter is used to estimate the proportion of the total biomass in U.S. waters and to calculate U.S. catch limits. The average portion of the total Pacific mackerel biomass estimated in the U.S. West Coast EEZ is set in the FMP at 70 percent. The 70 percent distribution estimate is based on the average historical larval distribution obtained from scientific cruises and the distribution of the resource according to the logbooks of aerial fish-spotters.

The Council has recommended, and NMFS is proposing, Pacific mackerel harvest specifications for both the 2023–2024 and 2024–2025 fishing seasons. For the 2023–2024 Pacific mackerel fishing season these include an OFL of 11,693 mt, an ABC and ACL of 9,754 mt, a HG of 7,871 mt, and an ACT of 6,871 mt. For the 2024–2025 Pacific mackerel fishing season these include an OFL of 12,765 mt, an ABC and ACL of 10,073 mt, a HG of 8,943 mt, and an ACT of 7,943 mt. These catch specifications are based on the OFL and ABC control rules established in the CPS FMP, recommendations from the Council's SSC and other advisory bodies, and biomass estimates of 55,681 mt (2023–2024) and 60,785 mt (2024–2025). The biomass estimates are the result of a benchmark stock assessment the NMFS SWFSC completed in June 2023, which was reviewed by a Stock Assessment Review Panel.¹ At the June 2023 Council meeting, the Council's SSC reviewed and approved, and the Council adopted, the 2023 benchmark stock assessment and resulting biomass estimates as the best scientific information available for setting harvest specifications for the 2023–2024 and 2024–2025 Pacific mackerel fishing seasons.

Under this proposed action, in the unlikely event that catch reaches the ACT in either fishing season, directed fishing would close, reserving the difference between the HG and ACT (1,000 mt) as a set-aside for incidental landings in other fisheries and other sources of mortality.² For the remainder of the fishing season, incidental landings in CPS fisheries would be constrained to a 45 percent incidental catch allowance (in other words, no more than 45 percent by weight of the CPS landed per trip may be Pacific

mackerel); and in non-CPS fisheries, up to 3 mt of Pacific mackerel may be landed incidentally per fishing trip. The incidental set-aside is intended to allow continued operation of fisheries for other stocks, particularly other CPS stocks that may school with Pacific mackerel.

The NMFS West Coast Regional Administrator will publish a notice in the **Federal Register** announcing the date of any closure of directed fishing (when harvest levels reach or exceed the ACT). Additionally, to ensure the regulated community is informed of any closure, NMFS will also make announcements through other means available, including email to fishermen, processors, and state fishery management agencies.

Comments on this proposed rule and on NMFS' determination that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities (as discussed below in the Classification section), may be submitted via <https://www.regulations.gov> (see **DATES** and **ADDRESSES**).

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent with the CPS FMP, other provisions of the Magnuson-Stevens Act, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

The basis and purpose of this rulemaking is to set an OFL, ABC, ACL, HG, and ACT for the Pacific mackerel fishery based on the harvest control rules in the CPS FMP. These specific harvest control rules are applied to the current stock biomass estimate to derive these catch specifications, which are used to manage the commercial take of Pacific mackerel. A component of these control rules is that as the estimated biomass decreases or increases from one year to the next, so do the applicable quotas. The harvest control rules in the CPS FMP remain unchanged by this proposed action.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities, for the following reasons:

For Regulatory Flexibility Act (RFA) purposes only, NMFS has established a small business size standard for

businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (NAICS code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates) and has combined annual receipts not in excess of \$11 million for all its affiliated operations worldwide.

Pacific mackerel harvest is one component of CPS fisheries off the U.S. West Coast that also includes the fisheries for the Pacific sardine, northern anchovy, and market squid. Pacific mackerel are principally caught off southern California within the limited entry portion (south of 39 degrees N lat.; Point Arena, California) of the fishery. Currently there are 55 vessels permitted in the Federal CPS limited entry fishery off California. The average annual per vessel revenue in 2022 for vessels that landed Pacific mackerel was well below the threshold level of \$11 million; therefore, all of these vessels are considered small businesses under the RFA.

Because each affected vessel is a small business, this proposed rule is considered to equally affect all of these small entities in the same manner. Additionally, the harvest specifications proposed in this rule would not constrain catch disproportionately for small entities in different size categories, as they remain well above the annual coastwide landings. Therefore, this rulemaking would not create disproportionate costs between small and large vessels/businesses.

NMFS used the ex-vessel revenue information for a profitability analysis, as the cost data for the harvesting operations of CPS finfish vessels was limited or unavailable. For the 2022–2023 fishing season, the HG was 5,822 mt with an ACT of 4,822 mt and an incidental set-aside of 1,000 mt. Approximately 886 mt of Pacific mackerel were harvested in the 2022–2023 fishing season with an estimated ex-vessel value of approximately \$426,324.

The proposed HG for the 2023–2024 Pacific mackerel fishing season is 7,871 mt, with a proposed ACT of 6,871 mt and an incidental set-aside of 1,000 mt. The proposed HG for the 2024–2025 Pacific mackerel fishing season is 8,943 mt with a proposed ACT of 7,943 mt and an incidental set-aside of 1,000 mt. The proposed ACTs for these fishing seasons are slightly higher than the prior 2 fishing seasons (*i.e.*, 7,323 mt for 2021–2022 and 4,822 mt for 2022–2023). Pacific mackerel landings off the U.S. West Coast over the last 10

¹ Stock Assessment Review (STAR) Panel meetings are formal, public, multiple-day meetings of stock assessment experts who conduct a detailed technical evaluation of full (*e.g.*, benchmark) stock assessments. The 2023 Pacific Mackerel STAR Panel meeting was held April 11–13, 2023.

² Directed fishing for live bait and minor directed fishing is allowed to continue during a closure of the directed fishery.

management seasons (2012–2013 through 2021–2022) have averaged about 3,800 mt. Therefore, the ACTs proposed in this rule are not expected to affect profitability to the fleet from catching Pacific mackerel compared to last season or recent catch levels. Accordingly, vessel income from fishing is not expected to be altered as a result of this rulemaking as it compares to recent catches in the fishery, including under the previous season’s regulations. Based on the disproportionality and profitability analysis above, the proposed action, if adopted, will not have adverse or disproportional economic impact on these small business entities. As a result, an Initial Regulatory Flexibility Analysis is not required, and none has been prepared. This action does not contain a collection-of-information requirement for purposes of the Paperwork

Reduction Act. There are no relevant Federal rules that may duplicate, overlap, or conflict with the proposed action.

List of Subjects in 50 CFR Part 660

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: September 26, 2023.

Samuel D. Rauch, III,
Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 660 is proposed to be amended as follows:

PART 660—FISHERIES OFF WEST COAST STATES

■ 1. The authority citation for part 660 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*, 16 U.S.C. 773 *et seq.*, and 16 U.S.C. 7001 *et seq.*

■ 2. In § 660.511, revise paragraphs (i)(1) and (2) to read as follows:

§ 660.511 Catch restrictions.

* * * * *

(i) * * *

(1) For the Pacific mackerel fishing season July 1, 2023, through June 30, 2024, the harvest guideline is 7,871 mt and the ACT is 6,871 mt; and

(2) For the Pacific mackerel fishing season July 1, 2024, through June 30, 2025, the harvest guideline is 8,943 mt and the ACT is 7,943 mt.
