

these few instances, funding for private crossings may be provided for specific corridor projects, most commonly the high speed rail corridors.

3. *Legal status.* Private crossing rights vary from ownership of the fee simple (outright ownership of the underlying property), to documented easements, to prescriptive easements (where recognized), to documented licenses under contract, to verbal licenses subject to revocation without notice. The entities enjoying rights under these arrangements may be referred to as "holders" of the right to cross.

Increasingly over the past 15 years, railroads have sought to establish maximum control over these intermodal intersections by requiring crossing holders to purchase insurance or provide other protection in the event a holder, railroad or a third party experiences a loss due to a collision. Contracts or other legal instruments may further define responsibilities (e.g., for maintenance of the crossing surface or providing notifications under stated conditions).

4. *Extent of regulation.* In general, private crossings are not subject to regulation at the State or Federal level. FRA's requirements for inspection, test and maintenance of active warning devices (49 CFR part 234) apply to the railroad where active warning has been installed; but there is no Federal mandate for providing such warning.¹ A handful of States require that railroads place crossbucks or special signage (in some cases a stop sign and a crossbuck on the same post) at private crossings. The subject of private crossings is otherwise largely unregulated. Accordingly, such recognized responsibilities as exist with respect to the safety of private crossings are generally the product of contracts and common law. (For a general description of responsibilities related to crossing safety, see Safety Advisory 2005-03; Highway-Rail Grade Crossing Safety (70 FR 22750; May 2, 2005)).

Request for Comments

While FRA solicits discussion and comments on all areas of safety at private highway-rail grade crossings, we particularly encourage comments on the following topics:

- At-grade highway-rail crossings present inherent risks to users, including the railroad and its employees, and to other persons in the

vicinity should a train derail into an occupied area or release hazardous materials. When passenger trains are involved, the risks are heightened. From the standpoint of public policy, how do we determine whether creation or continuation of a private crossing is justified?

- Is the current assignment of responsibility for safety at private crossings effective? To what extent do risk management practices associated with insurance arrangements result in "regulation" of safety at private crossings?

- How should improvement and/or maintenance costs associated with private crossing be allocated?

- Is there a need for alternative dispute resolution mechanisms to handle disputes that may arise between private crossing owners and the railroads?

- Should the State or Federal government assume greater responsibility for safety at private crossings?

- Should there be Nationwide standards for warning devices at private crossings, or for intersection design of new private grade crossings?

- How do we determine when a private crossing has a 'public purpose' and is subject to public use?

- Should some crossings be categorized as 'commercial crossings', rather than as 'private crossings'?
- Are there innovative traffic control treatments that could improve safety at private crossings on major rail corridors, including those on which passenger service is provided?

- Should the Department of Transportation request enactment of legislation to address private crossings? If so, what should it include?

Issued in Washington, DC, on July 20, 2006.

Administrator.
