

National Agricultural Statistics Service

Title: Cooperator Funded Chemical Use Surveys.

OMB Control Number: 0535–0273.

Summary of Collection: The primary function of the National Agricultural Statistics Service (NASS) is to prepare and issue current official State and national estimates of crop and livestock production, value, disposition, and resource use. General authority for these data collection activities is granted under U.S. Code title 7, section 2204. This statute specifies that “The Secretary of Agriculture shall procure and preserve all information concerning agriculture which he can obtain . . . by the collection of statistics . . . and shall distribute them among agriculturists.” NASS’s cooperators have sought NASS’s assistance to provide statistics beneficial to agriculture but are not covered by NASS’s annual Congressional appropriation.

Data collected in the Maryland Pesticide Usage Survey will provide the Maryland Dept. of Agriculture (MdDA) with comprehensive information about what pesticides are being used around the state and future surveys will help determine what trends are developing. The data will also help agriculture and industry professionals understand what is being used, and it will provide public and environmental health experts with information that can help them focus their research and monitoring efforts.

The primary use for the Minnesota Pesticide and Fertilizer Survey data will be to allow the Minnesota Dept. of Agriculture (MnDA) staff to evaluate the effectiveness and adoption levels of the voluntary Best Management Practice (BMP) guidelines by periodically summarizing pesticide and fertilizer use statistics at the county level and MnDA management district levels. County level detail is needed because there are different BMPs written for specific Pesticide Management Areas (PMA) based on chemical residue found in ground water or surface water through other monitoring means. Fertilizer data will be summarized under different Nitrogen Best Management Practice Regions based on soil types and a separate monitoring program. Results from the Minnesota Pesticide and Fertilizer Best Management Practices Survey will allow the MnDA staff to promote the voluntary nature of the BMPs by demonstrating the adoption levels and practices farmers are using have remained consistent with the BMP guidelines. If verified, this will avoid the need for any mandatory restrictions on chemical use and/or practices.

The primary use for the Mississippi State University Extension Service’s (MSUES) Field Crop Production Practice and Chemical Use Surveys will be to create Enterprise Budgets for corn, cotton, rice, wheat, and soybeans. No chemical use data will be published, but chemical use data are an important part of determining Enterprise Budgets.

The Illinois Nutrient Loss Reduction Strategy (NLRs) survey will be conducted on an every-other year basis (for odd numbered years) through a cooperative agreement with the Illinois Nutrient Research Education Council, developed by the Illinois Department of Agriculture. The goal of this survey is to produce statistically defensible estimates of several “in field” and “edge of field” practices conducted by Illinois farmers. These practices have been shown to positively impact water quality by reducing runoff and leaching of nutrients into the waters of Illinois. One of the primary goals of the NLRs is to track implementation of these cultural practices over time to measure implementation of the NLRs.

Need and Use of the Information: The Field Crop Production Practice and Chemical Use Surveys in this request will be conducted to meet research and publication goals for Extension and State Departments of Agriculture. The summarized and published information will be analyzed by the sponsoring cooperators and stakeholders in agriculture. Results will be used to study production agriculture, as well as various programs and policies to determine their impact on agricultural producers and consumers.

SUPPLEMENTARY INFORMATION:

Background

Section 723(a)(1) of the Defense Production Act of 1950, as amended (DPA) (50 U.S.C. 4568), requires the President to submit an annual report to Congress on the impact of offsets on the U.S. defense industrial base. Section 723(a)(2) of the DPA directs the Secretary of Commerce (Secretary) to prepare the President's report and to develop and administer the regulations necessary to collect offsets data from U.S. defense exporters.

The authorities of the Secretary regarding offsets have been delegated to the Under Secretary of Commerce for Industry and Security. The regulations associated with offsets reporting are set forth in 15 CFR part 701 (Offsets Regulations). Offsets are compensation practices required as a condition of purchase in either government-to-government or commercial sales of defense articles and/or defense services, as defined by the Arms Export Control Act (22 U.S.C. 2778) and the International Traffic in Arms Regulations (22 CFR 120 through 130). Offsets are also applicable to certain items controlled on the Commerce Control list (CCL) and with an Export Control Classification Number (ECCN) including the numeral "6" as its third character. The CCL is found in supplement no. 1 to part 774 of the Export Administration Regulations (EAR).

An example of an offset is as follows: a company that is selling a fleet of military aircraft to a foreign government may agree to offset the cost of the aircraft by providing training assistance to plant managers in the purchasing
