

silicon wafer (typically 300 mm in diameter) and are welded to thermocouple wires of the same composition as the thin films. The advantages of very low mass thin-film thermocouples in making these measurements are greatest under the extremely high heat flux conditions present in rapid thermal processing tools (100 w/cm²). In order to achieve these measurements with thin-film thermocouples at temperatures ranging up to 900 degrees celsius a novel approach was taken in the design and fabrication of the wafer including the incorporation of an adhesion film for the thermoelements, diffusion barriers, and high temperature dielectric insulators.

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Marine Fisheries Service (NMFS) manages the commercial groundfish harvest off Alaska based on an annual total allowable catch for each species. This is based on "round" weight, or the weight of the fish prior to processing. However, much of the fish harvested off Alaska is harvested by vessels that process the catch at-sea and do not land whole fish. One way that NMFS uses to estimate the total weight of fish harvested by processing vessels is by requiring the vessel to weigh all or part of their catch on a motion-compensated scale. At this time, two groups of vessels are required to weigh all catch at-sea: catcher processors and motherships that are listed under the American Fisheries act as eligible to harvest pollock; and trawl catcher processors and motherships that are harvesting fish under the Community Development Quota Program (CDQ quota). Non-trawl catcher/processors that harvest CDQ quota are not required to weigh all catch, but they are required to weigh samples of catch. All of these vessels must also provide an observer sampling station where NMFS-certified observers can work. The station must be inspected and approved annually by NMFS.

II. Method of Collection

Scale manufacturers must submit documentation if they wish to have a scale approved by NMFS. Vessel owners required to weigh catch must use NMFS-inspected scales and sampling stations. To schedule an inspection, they must submit a request form. Vessels required to weigh all catch must test their scales daily and maintain documentation verifying that the testing took place. These vessels must also maintain a printed record of the weight of each haul that was required to be weighed. Finally, inspectors employed by other Federal, state, or local weights and measures agencies may request authority to inspect scales on behalf of NMFS.

III. Data

OMB Number: 0648-0330.

Form Number: None.

Type of Review: Regular submission.

Affected Public: Business and other for-profit organizations.

Estimated Number of Respondents: 49.

Estimated Time Per Response: 176 hours for the scale type evaluation, 45 minutes for conducting and maintaining a record of the daily scale test, 6 minutes to retain a daily printed scale

output, 6 minutes for the request for scale inspection, 6 minutes for maintenance of a scale approval sticker, 6 minutes for an application to inspect scales on behalf of NMFS, and 2 hours to make a request for observer sampling station inspection and maintaining the results.
