

1. The Optional Elements and Guidelines for Use

Publishers are encouraged to apply markup beyond the baseline (required) elements. The complete DTBook Element Set reflects the tags necessary to create the six types of Digital Talking Books referenced in Section II and Braille output. Because of the present necessity to subdivide the creation of alternate format materials into distinct phases, the Panel determined that baseline elements would be provided by publishers, and optional elements would be added to the NIMAS-compliant files by third party conversion entities. In both circumstances the protocols for tagging the digital files should conform to the ANSI/NISO Z39.86 specification. For this reason, the optional elements beyond the baseline set are included as an Appendix C, and content converters are directed to the DAISY Structure Guidelines (<http://www.daisy.org/publications/guidelines/sg-daisy3/structguide.htm>) for guidance on their use.

2. Package File

A package file describes a publication. It identifies all other files in the publication and provides descriptive and access information about them. A publication must include a package file conforming to the NIMAS. The package file is based on the Open eBook Publication Structure 1.2 package file specification (For most recent detail please see <http://www.openebook.org/oebps/oebps1.2/download/oeb12-xhtml.htm#sec2>). A NIMAS package file must be an XML-valid OeB PS 1.2 package file instance and must meet the following additional standards:

The NIMAS Package File must include the following Dublin Core (dc:) metadata:

- dc:Title.
- dc:Creator (if applicable).
- dc:Publisher.
- dc>Date (Date of NIMAS-compliant file creation—yyyy-mm-dd).
- dc:Format (=“NIMAS 1.0”).
- dc:Identifier (a unique identifier for the NIMAS-compliant digital publication, e.g., print ISBN + “-NIMAS”—exact format to be determined).
- dc:Language (one instance, or multiple in the case of a foreign language textbook, etc.).
- dc:Rights (details to be determined).
- dc:Source (ISBN of print version of textbook).

And the following x-metadata items:

- nimas-SourceEdition (the edition of the print textbook).

- nimas-SourceDate (date of publication of the print textbook).

The following metadata were proposed also as a means of facilitating recordkeeping, storage and file retrieval:

- dc:Subject (Lang Arts, Soc Studies, etc.).
- nimas-grade (specific grade level of the print textbook, e.g.; Grade 6).
- nimas-gradeRange (specific grade range of the print textbook, e.g.; Grades 4–5).

And additional suggestion references the use of:

- dc:audience:educationLevel (for the grade and gradeRange identifiers, noting that Dublin Core recommends using educationLevel with an appropriate controlled vocabulary for context, and recommends the U.S. Department of Education's Level of Education vocabulary online at <http://www.ed.gov/admin/reference/index.jsp>. Using educationLevel obviates the need for a separate field for gradeRange since dc elements can repeat more than once. A book used in more than one grade would therefore have two elements, one with value “Grade 4” and another with value “Grade 5.”

A final determination as to which of these specific metadata elements to use needs to be clarified in practice. The package manifest must list all provided files (text, images, etc.). The package spine must reference all text content files in order. (Note: For purposes of continuity and to minimize errors in transformation and processing, the NIMAS-compliant digital text should be provided as a single document.)

E911 Requirements for IP-Enabled Service Providers

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

The Commission initiates this rulemaking to determine what additional steps it should take to ensure that providers of VoIP services that interconnect with the nation's PSTN provide ubiquitous and reliable E911 service.
