

measures in consultation with the appropriate regulatory agency, if needed.

Western will develop a Mitigation Action Plan (MAP) to provide additional information on how mitigation measures, associated with the proposed Project, would be implemented. The MAP would be developed and made available prior to any project activities directed by this Record of Decision (ROD) that are subject to a mitigation commitment.

Consultation

Western is the lead Federal agency for compliance with Section 106 of the National Historic Preservation Act (NHPA) and Tribal consultation for all components of the Project. The Applicant would avoid all archaeological and traditional cultural properties determined significant in consultation with the South Dakota State Historic Preservation Officer (SHPO) and interested Tribes. Western prepared a Programmatic Agreement (PA) in coordination with the South Dakota SHPO. The PA was executed on December 18, 2006. It establishes the Area of Potential Effect for the proposed Project, proposes a treatment plan for identified resources, describes procedures for unanticipated discoveries, sets forth procedures for Tribal consultation, and suggests general mitigation measures. The PA ensures that there would be no "unmitigatable" adverse effects on historic properties as defined under the NHPA. The Applicant would avoid areas containing identified resources.

Western is also the lead for compliance with Section 7 of the Endangered Species Act. Western prepared a biological assessment and submitted it to the USFWS. Western determined that the project may affect but is not likely to adversely affect the western prairie fringed orchid, the Topeka shiner, and the bald eagle and is not likely to affect the Dakota skipper. The USFWS responded with a letter of concurrence on May 30, 2006, and an e-mail on May 31, 2007. Western reviewed additional literature and conducted field reconnaissance to supplement this analysis. Western may conduct further field studies prior to construction as a component of the Applicant's monitoring study. Western will continue to consult informally with the USFWS.

Floodplain Statement of Findings

Western prepared a floodplain assessment in the EIS according to 10 CFR part 1022. The assessment can be found in the Draft EIS along with project

maps. The Federal Emergency Management Agency has not updated the Flood Insurance Rate Maps for this portion of South Dakota to reflect 500-year floodplains. One-hundred-year floodplains occur along Deer Creek and along several unnamed streams in the Project Area. The floodplains are generally confined to the streambed and immediately adjacent, low-lying areas. The floodplains associated with the ephemeral streams generally range from 200 to 500 feet in width. The Deer Creek floodplain ranges from approximately 400 to 1,500 feet in width. On-site or off-site flooding would not result from construction and operation of the proposed Project. The Applicant would not construct WTGs in floodplains. Implementation of county-approved design standards for areas of concentrated flow would ensure that on-site or off-site flooding does not occur.

Decision

Western decided to grant the Applicant's request to interconnect with Western's transmission system at the White Substation. The Proposed Action would meet the Applicant's objectives for the Project. Construction, operation, and maintenance of the proposed Project would not result in significant, short- or long-term environmental impacts. The Applicant would employ all practical means to avoid or minimize environmental harm as a result of the proposed Project.

This ROD meets the requirements of NEPA as well as the Council on Environmental Quality and DOE's NEPA implementing regulations. Additional analyses may affect this decision and result in subsequent analysis or decisions. Western will notify the public of any additional activities necessary to meet Western's NEPA and other public involvement requirements.
