#### II. Discussion

Section 54.29 of title 10 of the *Code of Federal Regulations* (10 CFR) establishes the standards for issuance of a renewed license. For nuclear power plants that have received a renewed license, the regulations in 10 CFR 54.31(d) state that “[a] renewed license may be subsequently renewed in accordance with all applicable requirements.” The GALL-SLR Report and SRP-SLR were originally issued in 2017 to provide guidance for subsequent license renewals. The GALL-SLR Report discusses generic aging management reviews of systems, structures, and components (SSCs) that may be within the scope of subsequent license renewal applications (SLRAs) and identifies aging management programs (AMPs) that are determined to

be acceptable for managing the effects of aging on SSCs within the scope of license renewal, as required by 10 CFR part 54. If an applicant's SLRA credits an AMP described in the GALL–SLR Report, the applicant should ensure that the conditions and operating experience (OE) at the plant are bounded by the conditions and OE for which the GALL–SLR Report program was evaluated. If these bounding conditions are not met, the applicant should address any additional aging effects and augment the AMPs for subsequent license renewal. If an SLRA references the approach described in the GALL–SLR Report as the approach used for managing the aging effect(s), the NRC staff will use the GALL–SLR Report as a basis for the SLRA assessment, consistent with guidance specified in the SRP–SLR.

The SRP–SLR, which references the GALL–SLR Report, provides guidance to

the NRC staff reviewers in the Office of Nuclear Reactor Regulation. These reviewers perform safety reviews of applications to renew nuclear power plant licenses in accordance with 10 CFR part 54.

After the initial issuance of the GALL–SLR Report and SRP–SLR in 2017, several documents referred to as Subsequent License Renewal Interim Staff Guidance (SLR–ISGs) were created to reflect new or updated industry guidance, codes, or standards; relevant plant operating experience; incorporation of lessons learned from completed SLR application reviews; development of new aging management programs or aging management review items; and identification of required corrections and clarifications to the guidance. GALL–SLR Report, Revision 1, and SRP–SLR, Revision 1, incorporate the issued SLR–ISGs. Additional

updates were identified subsequent to issuance of the SLR–ISGs, which are also incorporated in the revisions to the GALL–SLR Report and SRP–SLR. The issued SLR–ISGs are listed in the “Availability of Documents” section.

Supplement 1 of the Technical Bases Document is a knowledge management and knowledge transfer document associated with GALL–SLR Report, Revision 1, and SRP–SLR, Revision 1. This supplement details the technical changes that were made in the revisions to the GALL–SLR Report and SRP–SLR and provides the underlying rationale that the NRC staff used for those technical changes.
