The general area of planned activities of Clean diesel V is to achieve NO_x and HC level of 0.2g/hp-hr, PM level of 0.01g/hp-hr and NMHC of 0.14 g/hp-hr over the U.S. transient heavy-duty test cycle and develop pre-competitive diesel engine technology through the investigation of the following technologies: Advanced low temperature combustion, advanced exhaust aftertreatment technology development, advanced fuels and lubricant formulations and advanced system controls. The goals are to maintain the fuel economy, CO₂ emissions, and specific engine power output comparable to the best 2007 engines. European and Japanese test cycles, as well as off-highway and light-duty test cycles will be included in evaluation of the developed technologies.

Membership in this research group remains open, and the participants intend to file additional written notification disclosing all changes in membership or planned activities.
