SUPPLEMENTARY INFORMATION:

I. Information About CADDIS

Over a thousand water bodies in the United States are listed by states as

biologically impaired. For many of these sites, the cause of impairment is reported as "unknown." Before appropriate management actions can be formulated for impaired water bodies, the causes of biological impairment (e.g., excess fine sediments, nutrients, or toxics) must be identified. Effective causal analyses require knowledge of the mechanisms, symptoms, and stressor-response relationships for various stressors, as well as the ability to use that knowledge to draw appropriate, defensible conclusions. To aid in these causal analyses, NCEA developed CADDIS, which is a web-based decision support system that will help regional, state, and tribal investigators find, access, organize, and share information useful for causal evaluations in aquatic systems. CADDIS is based on EPA's Stressor Identification process, which is a formal method for identifying causes of impairments in aquatic environments. Features include a step-by-step guide to conducting causal analysis; examples and applications; a library of conceptual models; and an online application for collaborating on conceptual diagrams and using them to update and access a database of supporting literature, information on basic and advanced data analyses, downloadable software tools, and links to outside information sources.

Background: The Agency's *National Water Program Strategy: Response to Climate Change* (2008) identified the need to provide drinking water and wastewater utilities with easy-to-use resources to assess the risk associated with climate change and to identify potential adaptation strategies. The NDWAC, established under the Safe Drinking Water Act, as amended (42 U.S.C. 300f *et seq.*), provides practical and independent advice, consultation and recommendations to the Agency on the activities, functions and policies related to the implementation of the Safe Drinking Water Act. On May 28, 2009, the NDWAC voted on and approved the formation of the CRWU Working Group. EPA anticipates that the Working Group will have five face-
