Abstract: Gasoline volatility, as measured by Reid Vapor Pressure (RVP) in pounds per square inch (psi), is controlled during the summer ozone season (June 1 to September 15) in order to minimize evaporative hydrocarbon emissions from motor vehicles. RVP is subject to a federal standard of 7.8 psi or 9.0 psi, depending on location. The addition of ethanol to gasoline increases the RVP by about 1 psi. Gasoline that contains between nine and 15 volume percent ethanol is provided a 1.0 psi waiver such that the RVP may be up to 8.8 psi or 10.0 psi for a federal standard of 7.8 psi or 9.0 psi respectively. As an aid to industry compliance and EPA enforcement, the product transfer document (PTD), which is prepared by the gasoline producer or importer and which accompanies a shipment of gasoline containing ethanol, is required by regulation to contain a legible and conspicuous statement that the gasoline contains ethanol and the percentage concentration of ethanol. This is intended to deter the mixing within the distribution system, particularly in retail storage tanks, of gasoline containing between nine and 15 volume percent ethanol with gasoline which does not contain ethanol in that range. Such mixing would likely result in a gasoline which is in violation of its RVP standard. Also, a party seeking a testing exemption for research on gasoline that is not in compliance with the applicable volatility standard must submit certain information to EPA. EPA has additional PTD requirements for gasoline containing ethanol at 40 CFR 80.1503. Those requirements are covered in a separate ICR.

Form Numbers: None.

Respondents/affected entities: Entities potentially affected by this action are those who produce or import gasoline

containing ethanol, or who wish to obtain a testing exemption.

Respondent's obligation to respond: Mandatory per 40 CFR 80.27(d) and (e).

Estimated number of respondents: 2,200.

Frequency of response: On occasion.

Total estimated burden: 1,410 hours per year. Burden is defined as 5 CFR 1320.03(b).

Total estimated cost: \$154,030, includes \$10 annualized capital or operation & maintenance costs.

Changes in Estimates: With just about all PTDs now computer-generated, the average time to include the regulatory language on each PTD has decreased from one second to 0.1 second. The total annual burden has decreased from 12,330 hours per year to 1,410 hours per year.

Dated: March 25, 2020.

Byron J. Bunker,

Director, Compliance Division, Office of Transportation and Air Quality, Office of Air and Radiation.
