Research project I involves assessing the efficiency with which seals assimilate and metabolize amino acids and fatty acids from common prey types, and elucidating and monitoring how reproductive and metabolic activity of male Hawaiian monk seals are related. Dr. Shannon Atkinson is the principal researcher/co-investigator for this project is.

The permit holder requested authorization to amend the Permit to allow training of seals to accept a rectal temperature probe to take daily temperature measurements. The purpose of the research is to establish baseline temperatures as a diagnostic tool, and use the values to calculate heat transfer budgets for seals as part of a master's thesis conducted under the advisement of Dr. Shannon Atkinson. The application did not contain sufficient information for NMFS to determine that the research was bona fide.
