The NOA of the Draft EIS was published in the **Federal Register** on July 19, 2024, initiating a 45-day public comment period that ended on September 4, 2024 (89 FR 58733, July 19, 2024). The availability of the Draft EIS and request for comments were announced on the TVA website; in regional and local newspapers; in a news release; and in letters to local, state, and federal agencies and federally recognized tribes. TVA held a public meeting for the Draft EIS on August 15, 2024, at the Caledonia Community Center in Columbus, Mississippi.

TVA received nine submissions totaling 100 unique comments on the Draft EIS. Substantive comments are addressed in Appendix A of the Final EIS.

Following the publication of the NOA for the Final EIS in January 2025, TVA received no additional public or agency comments.

#### Decision

TVA has considered all the alternatives, information, analyses, material in the record determined to be relevant, and comments submitted by Federal, State, Tribal, and local governments and public commenters for consideration in developing the Final EIS.

TVA has decided to implement the Preferred Alternative identified in the Final EIS. Under this alternative, TVA would construct the simple cycle frame CT at the NCG site, which would be capable of generating approximately 500 MW. The addition of CT units to the fleet aligns with the 2019 IRP recommendation to enhance system flexibility and TVA's May 2021 Strategic Intent and Guiding Principles.

#### Mitigation Measures

TVA would employ standard practices, routine measures, and other project-specific measures to avoid and minimize effects to resources from the

implementation of Alternative B. TVA would also implement minimization and mitigation measures based on BMPs, permit requirements, and adherence to erosion and sediment control plans to minimize erosion during construction, operation, and maintenance activities. The BMPs are described in TVA's A Guide for Environmental Protection and BMPs for TVA Construction and Maintenance Activities—Revision 4.

For those activities with potential to affect bats, TVA committed to implementing conservation measures established through TVA's programmatic consultation on routine actions with potential to affect federally listed bats that was completed in April 2018 and updated May 2023 and November 2024 with the U.S. Fish and Wildlife Service in accordance with Section 7(a)(2) of the Endangered Species Act. In areas requiring tree removal, clearing activities would be limited to winter periods (October 1–March 14) to minimize impacts to wildlife and protected species. Unavoidable impacts to potential suitable summer roosting habitat for the proposed endangered tricolored bat (*Perimyotis subflavus*) and endangered Indiana bat (*Myotis sodalis*) would be addressed using TVA's programmatic consultation. The conservation measures required for this project are identified in Appendix C of the Final EIS, and they would be implemented as part of the proposed project. Winter tree removal and conservation measures implemented through TVA's bat programmatic consultation would also minimize unavoidable impacts to summer roosting habitat for the Indiana bat and tricolored bat.

To minimize potential impacts to transportation, a transportation study would be conducted to determine the routes used for delivery of construction equipment and project materials. Roads used to access the project area would be surveyed to determine the existing conditions prior to construction. Finally, based on the results of the transportation study and road survey, a traffic impact analysis would be performed if necessary to address potential roadway impacts.
