Needs and Uses: The Commission will use the information requirements to determine whether and to what extent rural telecommunications carriers and competitive eligible telecommunications carriers (ETCs) providing the data are eligible to receive universal service support. This information includes loop counts, by disaggregation zone, for rural incumbent carriers, which is used to calculate the per-line high-cost universal service support amount available to competitive ETCs serving their territories. It also includes loop counts, by disaggregation zone or unbundled network element zone, for competitive ETCs, which is used to calculate the total high-cost universal service support amount available to competitive ETCs. This competitive ETC loop count requirement includes areas served by incumbent non-rural carriers, in addition to incumbent rural carriers, due to the consolidation of information collections included in a previous revision. Additionally, this information collection requires states to certify that incumbent rural carriers and

competitive ETCs are using the high-cost universal service support only for the provision, maintenance, and upgrading of facilities and services for which the support is intended. Finally, this information collection includes cost data filed by incumbent rural carriers on an as-needed basis to establish eligibility for the safety net and safety valve high-cost universal service support mechanisms.
