SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC has issued a renewal of Facility Operating License No. R-125, held by UML, which authorizes operation of the UMLRR. The UMLRR is a plate-type-fueled research reactor located on the UML campus in Lowell, Massachusetts. The renewed license continues to authorize the licensee to operate the UMLRR at a steady-state power level up to a maximum of 1000 kilowatts (thermal). Renewed Facility Operating License No. R-125 will expire 20 years from its date of issuance, February 3, 2022.

The renewed facility operating license complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations set forth in chapter I of title 10 of the *Code of Federal Regulations*. The Commission has made appropriate findings as required by the Act and the Commission's regulations, and sets forth those findings in the renewed facility operating license. The agency afforded an opportunity for hearing in the Notice of Opportunity to Request a Hearing published in the **Federal Register** on March 19, 2018 (83 FR 12036). The NRC received no requests for a hearing following the notice.

The NRC staff prepared a safety evaluation report (SER)—Renewal of the Facility Operating License for the University of Massachusetts Lowell Research Reactor related to the renewal of Facility Operating License No. R-125 and concluded, based on that evaluation, that the licensee can continue to operate the facility without endangering the health and safety of the public. The NRC staff also prepared an environmental assessment and finding of no significant impact regarding the renewal of the facility operating license, published in the **Federal Register** on August 4, 2021 (86 FR 41998), and concluded that renewal of the facility operating license will not have a significant impact on the quality of the human environment.
