

biodiversity, impact commercial and recreational fisheries, cause infrastructure damage, contribute to potential risks to human health, and create economic impacts. Ballast water discharge is a major pathway for NIS introduction from vessels operating in or entering waters of the United States.

The FPEIS identifies and assesses reasonable alternatives for the proposed action, including the No Action Alternative, addresses the likely consequences of a BWDS on the human and natural environment, and presents potential mitigation measures to avoid or minimize adverse effects upon the quality of the human and natural environment. In the FPEIS, the USCG analyzed five alternatives for a BWDS. These alternatives are summarized as follows:

Alternative 1—No Action Alternative: Under the No Action Alternative, the USCG would not establish a BWDS, but would continue the existing BWM program. As currently in force, the BWM program, established in 2004, directs ships to conduct mid-ocean BWE, retain ballast water onboard, or use an environmentally sound ballast water management method approved by the USCG.

Alternatives 2–4—Ballast Water Discharge Concentrations: These alternatives differ from each other in the concentration and size classes of organisms that would be permitted and the standard is progressively more stringent from Alternative 2 to Alternative 4. Alternative 2 provides for a protective standard of less than 10 organisms per cubic meter for organisms larger than 50 microns in minimum dimension; and less than 10 organisms per milliliter for organisms between 10 and 50 microns in minimum dimension. Alternative 3 provides for a protective standard of less than 1 organism per cubic meter for organisms larger than 50 microns in minimum dimension; and less than 1 organism per milliliter for organisms between 10 and 50 microns in minimum dimension. Alternative 4 provides for a protective standard of less than 0.1 organisms per cubic meter for organisms larger than 50 microns in minimum dimension; and less than 0.1 organisms per milliliter for organisms between 10 and 50 microns in minimum dimension.

Alternative 5—Sterilization: Alternative 5 would require the removal or inactivation of all living membrane-bound organisms (including bacteria and some viruses) larger than 0.1 microns.

Alternative 2 has been selected as the USCG's preferred alternative.

The USCG will file the FPEIS with the U.S. Environmental Protection Agency (EPA), as required. The EPA will then publish an NOA in the **Federal Register**, which reports all environmental impact statements filed with the EPA during the preceding week. The publication of the EPA NOA initiates a 30-day public review period. The timing of publication of this NOA in the **Federal Register** will be coordinated with the EPA NOA. By reason of this being a rulemaking action under the Administrative Procedure Act, the Final Rule constitutes the Record of Decision and it is being published this same date, consistent with 40 CFR 1506.10(b).
