

63738) that modifies the existing regulations, with the intent of improving accountability of these fishing activities, particularly those conducted to collect sharks for public display and those undertaken for scientific research. This rule will be effective December 10, 2003.

Specifically, the final rule contains the following provisions: (1) EFP holders must notify the local NMFS Office for Law Enforcement at least 24 hours prior to departure for all fishing trips conducted to collect HMS for the purpose of public display; (2) all live HMS retained for the purpose of public display must be tagged while still on board the fishing vessel with either a conventional dart tag or a microchip Passive Integrated Transponder (PIT) tag, both of which will be supplied by NMFS; (3) if warranted, NMFS may specify conditions for conducting fishing activities to collect HMS for public display in order to minimize mortalities of either targeted or bycatch species; (4) NMFS reserves the right to place an at-sea observer on board an authorized HMS collection vessel; (5) EFP and SRP holders must report all HMS collection activities regardless of whether they occur inside or outside the EEZ; (6) negative reports must be submitted for months when no HMS are collected; (7) applicants for EFP and SRP renewals must include with the application the previous year's year-end report and any delinquent reports for permits issued in prior years, in order to obtain the new permit; and (8) prohibitions concerning the submission of false information and violations of the terms and conditions of EFPs and SRPs. Although unrelated to these provisions, the rule also addresses EFPs for the pelagic longline directed swordfish fishery, in that EFPs would no longer be required for vessels to delay offloading of swordfish when an approved vessel monitoring system (VMS) is operating on board the vessel.

Comments are also requested for the issuance of EFPs to vessels fishing for HMS while operating under chartering arrangements within the EEZ of other nations. These EFPs would allow a U.S. fishing vessel to fish so as to be consistent with another country's regulations without violating U.S. regulations, and would ensure that such vessels report to the proper authorities. To date, however, NMFS has not received requests for such EFPs.

Also in November 2003, NMFS published the Final Amendment 1 to the Fishery Management Plan for Atlantic Tunas, Swordfish and Sharks. While the Amendment focuses primarily on shark management

measures, the issuance of EFPs and SRPs is addressed in that a separate display permitting system for HMS is to be developed apart from EFPs and SRPs issued for other purposes. This is an administrative change only, and current quotas as well as application and reporting requirements remain as established under the existing system. This provision may be implemented in a final rule that will likely be published in mid December 2003.

Final decisions on the issuance of any EFPs/SRPs will depend on the submission of all required information about the proposed activities, NMFS' review of public comments received on this notice, consistency with conclusions in the Final Environmental Impact Statement (EIS) contained in the Final HMS FMP (64 FR 13575; March 19, 1999), Environmental Assessments (EAs) or EISs, and any consultations with any appropriate Regional Fishery Management Councils, states, or Federal agencies. NMFS does not anticipate any environmental impacts from the issuance of these EFPs other than impacts already assessed in the Final HMS FMP.

SUPPLEMENTARY INFORMATION: On May 7, 2003, notice was published in the **Federal Register** (68 FR 24443) that a request for a scientific research permit to take the species identified above had been submitted by the above-named organization. The requested permit has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216).

This permit authorizes collection of eight weaned harbor seals from the wild over a two to three year period in the Gulf of Alaska for long-term holding and research at the ASLC. A maximum of 30 capture attempts will occur per year, and during each capture attempt, up to 20 seals may incidentally be caught in nets and released, and up to 100 seals may be incidentally disturbed at the haul-out sites. Weaned female pups captured will be sampled in the wild as follows: sedation or anesthesia; body mass, morphometrics, and 3D photogrammetry; blood, blubber, whisker, and skin samples; body composition; flipper tagging and microchip implant; ultrasound; fecal and urine collection; skin and mucosal swabs; endoscopy; and disease screening.

Once at the ASLC the following will be performed on the harbor seals: monthly health assessments (as described in sampling above); hormone challenge experiments; weights and measurements; blood sampling; fecal and urine sampling; blubber ultrasound; bio-electrical impedance; total blood volume determination; deuterium oxide administration; feeding trials; mucosal swabs, saliva collection, examination of external genitalia; blubber biopsies; video, photographic, radiographic, digital, and thermal imaging; and anesthesia and sedation as deemed necessary by the attending veterinarian.

This study investigates the importance of lipids in the diets of harbor seals and the long-term effects of high and low lipid diets on the growth, development, maturity, and health of seals. The permit has been issued for a five-year period.
