NUCLEAR REGULATORY COMMISSION

Draft Regulatory Guide; Issuance, Availability

The Nuclear Regulatory Commission has issued for public comment a draft of a proposed guide in its Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the staff in its review of applications for permits and licenses.

The draft guide, temporarily identified by its task number, DG–1105 (which should be mentioned in all correspondence concerning this draft guide), is titled "Procedures and Criteria for Assessing Seismic Soil Liquefaction at Nuclear Power Plant Sites." This draft guide is being developed to provide guidance to license applicants on methods acceptable to the NRC staff for evaluating the potential for earthquakeinduced instability of soils resulting from liquefaction and strength degradation.

This draft guide has not received complete staff approval and does not represent an official NRC staff position.
