

labels for vehicles with all vehicle attributes constant except those varied on the label. Instead of identifying the label that has the better metric, the respondent would be asked which of these vehicles she would prefer to buy. Comparisons will involve both conventional and advanced technology vehicles. Respondents may be asked to decide based not only on metrics, but also on price differences. For instance, a respondent may see a vehicle with better fuel economy but a higher purchase price. Because the survey will collect respondents' demographic and commute-pattern information, it will be possible to assess whether the commuter chose the vehicle that had lower costs for her commute.

For both these areas of study, the use of discrete-choice questions is intended to reduce both the time burden on respondents and the potential for respondents to manipulate results through strategic responses to questions.

2. Methods To Maximize Response Rate and Deal With Non-Response

We will use a number of approaches to increase the response rate and minimize potential non-response bias. These methods will include:

- Optimizing the questionnaire length and question types to strike the right balance between obtaining the necessary information and ensuring the questionnaire is not burdensome. The target length for the survey is 15 minutes.
- Interviewing five representative respondents using cognitive interview techniques in order to identify areas of misunderstanding, improved question wording, and areas of potential length reduction.
- Pre-testing the survey with a sample of 50 representative respondents to ensure that the survey programming functions as planned and that the data is stored in a way that allows for in-depth data analysis.
- Ensuring anonymity of respondent data by keeping any identifying information in a separate file from survey question responses. Appropriate procedures will be enacted to prevent unauthorized access to respondent data and by preventing disclosure of the responses of individual participants.
- Providing respondents with the primary investigator's contact information so that they can ask any questions regarding the questionnaire.
- Monitoring the response rate daily and address any issues daily in order to increase the response rate and reduce burden to respondents.

II. Burden Statement

The public reporting and recordkeeping burden for the Internet online survey collection of information is estimated to average 20 minutes per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

The ICR provides a detailed explanation of the Agency's estimate, which is only briefly summarized here:

Estimated total number of potential respondents: 6000.

Frequency of response: One time.

Estimated total average number of responses for each respondent: 1.

Estimated total annual burden hours: 2080 hours.

Estimated total annual burden costs: \$61,152.

What is the next Step in the process for this ICR?

EPA will consider the comments received. The final ICR package for the online Internet survey will be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

SUPPLEMENTARY INFORMATION:

A. Need for and Use of the Information Collection

The Housing and Economic Recovery Act of 2008 (HERA), Public Law 110-289, 122 Stat. 2654, amended the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (Safety and Soundness Act) (12 U.S.C. 4501 *et seq.*) and the Federal Home Loan Bank Act (12 U.S.C. 1421 *et seq.*) to establish FHFA as an independent agency of the Federal government.¹ One of FHFA's predecessor agencies, the former Federal Housing Finance Board (Finance Board), provided data concerning a survey of mortgage interest rates until HERA transferred those responsibilities to FHFA. This survey,

¹ See Division A, titled the "Federal Housing Finance Regulatory Reform Act of 2008," Tit. I, section 1101 of HERA.

known as the Monthly Interest Rate Survey or MIRS, is described in 12 CFR 906.5.

The information collection is used by FHFA to produce the MIRS and for general statistical purposes and program evaluation. The MIRS provides monthly information on interest rates, loan terms, and house prices by property type (all, new, previously occupied), by loan type (fixed- or adjustable-rate), and by lender type (savings associations, mortgage companies, commercial banks, and savings banks), as well as information on 15-year and 30-year fixed-rate loans. In addition, the MIRS provides quarterly information on conventional loans by major metropolitan area and by FHLBank district.

To conduct the MIRS, FHFA asks a sample of mortgage lenders to report voluntarily the terms and conditions on all single-family, fully amortized, purchase-money, non-farm loans that they close during the last five business days of the month. The MIRS excludes FHA-insured and VA-guaranteed loans, multifamily loans, mobile home loans, and loans created by refinancing another mortgage.

Information concerning the MIRS is published regularly on the FHFA Web site, <http://www.fhfa.gov>, in FHFA press releases, in the popular and trade press, including a monthly 1-page ARM index release, a monthly 8- or 12-page release with mortgage rate and term data, and an annual summary all available via FHFA's Web site, and in publications of other Federal agencies, including The Economic Report of the President and Statistical Abstract of the United States. FHFA publishes on its Web site the phone number for an automated telephone answering system that provides callers a recorded message about the ARM index and other MIRS information.

Economic policy makers use the MIRS data to determine trends in the mortgage markets, including interest rates, down payments, terms to maturity, terms on ARMs, and initial fees and charges on mortgage loans. Other federal banking agencies, such as the Board of Governors of the Federal Reserve System and the Council of Economic Advisors, use the MIRS results for research purposes.

FHFA considers MIRS, among other indexes or measures FHFA determines are appropriate, in establishing and maintaining a method to assess the national average one-family house price for use for adjusting the conforming loan limitations of Freddie Mac and Fannie Mae. 12 U.S.C. 4542. Other
