Patent application 10/601,893: TWO BAND IMAGING SYSTEM. A two band imaging system with two infrared focal plane array detectors, two filters of known band-pass, a dichroic beam splitter and an image processor. Each filter is placed in front of a corresponding infrared focal plane array detector, and the dichroic beam splitter is disposed within the system at a 45degree angle to the optical axis such that light entering the system is split and is simultaneously directed to each of the two infrared focal plane array detectors. The image processor simultaneously converts the light entering the two infrared focal plane array detectors into a real time absolute image.
