

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: 2007 National Survey on Drug Use and Health—(OMB No. 0930-0110)—Revision

The National Survey on Drug Use and Health (NSDUH), formerly the National

Household Survey on Drug Abuse (NHSDA) is a survey of the civilian, non-institutionalized population of the United States 12 years old and older. The data are used to determine the prevalence of use of tobacco products, alcohol, illicit substances, and illicit use of prescription drugs. The results are used by SAMHSA, ONDCP, Federal government agencies, and other organizations and researchers to establish policy, direct program activities, and better allocate resources.

With the exception of the addition of several follow-up questions on methamphetamine use, no changes to the questionnaire are proposed for the 2007 NSDUH. The proposed additional questions (age at first use and frequency of use in the past 12 months) will be asked of respondents who denied use of

methamphetamine in the “core” NSDUH because they didn't think of it as a prescription drug, but in a later series of questions admit to use (Respondents who report use of methamphetamine in the “core” already receive questions on age at first use and frequency of use). The additional burden associated with the new questions will be negligible because only a small subset of the sample will receive them.

As with all NSDUH/NHSDA surveys conducted since 1999, the sample size of the survey for 2007 will be sufficient to permit prevalence estimates for each of the fifty states and the District of Columbia. The total annual burden estimate is shown below:

Activity	Number of respondents	Number of responses per respondent	Average burden hours per respondent	Total burden hours
Household Screening	182,250	1	.083	15,127
Interview	67,500	1	1.0	67,500
Screening Verification	5,559	1	.067	372
Interview Verification	10,125	1	.067	678
Total	182,250	83,677

In accordance with the requirements of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, the Bureau of Immigration and Customs Enforcement (ICE) of the Department of Homeland Security (DHS) is giving notice that it proposes to implement a new system of records entitled "the General Counsel Electronic Management System" (GEMS). This system will consist of information that is created and used by attorneys working for ICE in the preparation and presentation of cases for a court or adjudicative body before which ICE or DHS is authorized or required to appear. The system will supplement and ultimately replace the current attorney work product paper files that are primarily stored and managed in the hardcopy alien file commonly known as the "A-file."

The ICE Office of the Principal Legal Advisor (OPLA) is responsible for the prosecution and/or management of cases before the federal courts, immigration courts, and other tribunals where immigration case matters are presented. Because of its significant caseload, OPLA is presented with a

tremendous data management problem. Recent changes to the immigration laws and increasing numbers of cases require changes and improved efficiency in the maintenance of case records and attorney work product regarding immigration matters. The proposed system will provide OPLA attorneys and other DHS and Department of Justice (DOJ) attorneys, who have a need for this information in the performance of their duties representing the agency real time, access to documents and attorney notes concerning the status and processing of immigration matters to multiple authorized users at their desktops and greatly reduce their reliance on the need to access the paper A-file.

GEMS consists of customized off-the-shelf software that has been developed to meet the growing needs for information management in the attorney field operations and attorney management offices of ICE. Although records will be maintained in GEMS by alien registration number, GEMS will provide attorneys and their supervisors with the ability to collect and locate case information without complete reliance on the physical A-file. In addition to maintaining investigative materials collected for the adjudication of immigration cases, GEMS will allow attorneys to store their case notes, other hearing related information, and briefs and memoranda related to cases. This should not only facilitate the work of the ICE attorneys involved in the case, but should also provide a legal resource for other attorneys who may be working on similar matters. The system will also provide management capabilities for tracking time and effort expended in the preparation and presentation of cases for a court or adjudicative body before which the ICE or DHS is authorized or required to appear.

The Privacy Act embodies fair information principles in a statutory framework governing the means by which the United States Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a "system of records." A "system of records" is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual.

The Privacy Act requires each agency to publish in the **Federal Register** a description denoting the type and character of each system of records that the agency maintains, and the routine uses that are contained in each system
