Title: Automatic Dependent Surveillance—Broadcast (ADS–B) Out

Performance Requirements to Support Air Traffic Control (ATC).

Form Numbers: FAA Form 337.

Type of Review: Clearance of a renewal of an information collection.

Background: Title 49 of the United States Code, Subtitle VII, Aviation Programs, described in detail the scope of the Federal Aviation Administration (FAA) Administrator's authority. Rulemaking for Automatic Dependent Surveillance–Broadcast (ADS–B) Out was promulgated under the authority described subtitle VII, part A, subpart I, section 40103, Sovereignty and use of the Airspace, and subpart III, section 44701, General requirements. Under section 40103, the FAA is charged with prescribing regulations on: (1) the flight of aircraft, including regulations on safe altitudes; (2) the navigation, protection, and identification of aircraft; and (3) the safe and efficient use of the navigable airspace. Under section 44701, the FAA is charged with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods and procedures the Administrator finds necessary for safety in air commerce and national security.

On May 28, 2010, the FAA published the final rule entitled “Automatic Dependent Surveillance–Broadcast (ADS–B) Out Performance Requirements to Support Air Traffic Control (ATC) Service”.¹ As of January 2, 2020, when operating in the airspace designated in 14 CFR 91.225(a) and (d), operators must be equipped with ADS–B Out avionics that meet the performance requirements of 14 CFR 91.227. In short, ADS–B rule airspace consists of the entirety of a Class B airport's airspace and the surrounding Mode C veil, Class C airspace and the airspace above Class C up to 10,000 ft, all U.S. sovereign airspace above 10,000 ft, and all Class A airspace. Basic elements of the ADS–B Out transmission include aircraft position, velocity, and identification information. Per appendix A of FAR part 43, installation of ADS–B Out avionics on certificated aircraft includes the completion of a Form 337 by the maintenance personnel accomplishing or supervising the installation. This form is submitted to document major alterations to an aircraft and is received by the Aircraft Registration Branch in Oklahoma City, OK for recordkeeping. This constitutes the only collection of information related to ADS–B Out equipage, although all information collected on Form 337 and its associated burden is already covered by OMB Control 2120–0020.

¹ 75 FR 30193.

Respondents: Maintenance or inspecting personnel responsible for ADS–B installation on an aircraft.

Frequency: N/A.

Estimated Average Burden per Response: 15 minutes per installation.

Estimated Total Annual Burden: Dependent on number of ADS–B installations conducted in a given period.

Issued in Washington, DC, on 18 April 2025.

Jamal A. Wilson,

ADS–B Program Analyst, AJM–42, ADS–B Program Office, PMO Surveillance Services, Air Traffic Organization, FAA.
