

Title: Growing Ehrlichia Species in a Continuous Cell Line U.S. Patent Application Serial No. 07/518,182.

Filing Date: 05/03/90.

Domestic Status: Patent No.: 5,192,679.

Issue Date: 03/09/93.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7.

Ehrlichiosis is a non-communicable, rarely fatal, rickettsial disease found in the United States. It is clinically similar to Rocky Mountain Spotted Fever but lacks the distinctive rash and is related to Sennetsu Fever, found only in Japan. In the United States ehrlichiosis is caused primarily by *E. Chaffeensis*. The development of diagnostics and vaccines for these diseases has been hampered by a lack of continuous cell lines to produce large quantities of Ehrlichia antigens. In this invention, a method of growing pathogenic Ehrlichia species in the continuous monocyte-macrophage cell line DH82 has been developed.
