II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statute also allows the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver’s medical certification.

The six individuals listed in this notice have requested an exemption from 49 CFR 391.41(b)(4). Accordingly, the Agency will evaluate the qualifications of each applicant to determine whether granting the exemption will achieve the required level of safety mandated by statute.

The physical qualification standard found in § 391.41(b)(4) states that a person is physically qualified to drive a CMV if that person has no current clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis, or any other cardiovascular disease of a variety known to be accompanied by syncope, dyspnea, collapse, or congestive cardiac failure.

In addition to the regulations, FMCSA has published advisory criteria¹ to assist medical examiners in determining whether drivers with certain medical

¹ These criteria may be found in 49 CFR part 391, APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section D. *Cardiovascular*: § 391.41(b)(4), paragraph 4, which is available on the internet at <https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf>.

²⁹ 17 CFR 200.30–3(a)(57).

conditions are qualified to operate a CMV in interstate commerce. The advisory criteria states that ICDs are disqualifying due to risk of syncope.

III. Qualifications of Applicants

John Gittenmeier

Mr. Gittenmeier is a commercial motor vehicle driver in Missouri. An August 2019, letter from Mr. Gittenmeier's cardiologist reports that his ICD was implanted in May of 2018, and that he denies any symptoms of palpitations, rapid heartbeat, shortness of breath, chest pains, syncope, or edema. His cardiologist reports that his most recent ejection fraction in 2018, was 40 percent.

Charles Huff

Mr. Huff is a commercial motor vehicle driver in Ohio. A July 2019, letter from his cardiologist reports that his ICD was implanted in 2012. Mr. Huff's cardiologist reports that he has episodes of non-sustained ventricular arrhythmia but has no countershock, that he had ATPs, (antitachycardia pacing) and that his ejection fraction is around 40 percent. Mr. Huff has an "Intrastate Only" Ohio Public Utilities Medical Examiner's Provisional Certificate that expires December 8, 2019. Mr. Huff seeks to operate a CMV in interstate commerce into the States of Indiana, Pennsylvania, and Michigan, for a distance of no more than 50 miles for a two-year period for each of the three States.

Brian Hullopeter

Mr. Hullopeter is a commercial motor vehicle driver in Minnesota. A July 2019, letter from his cardiologists reports that Mr. Hullopeter's ICD device was implanted in May of 2017, and has not deployed. His last echocardiogram showed normal left ventricular size and function.

Gaetano Letizia

Mr. Letizia is commercial driver in New Jersey. Letters dated July 2019, from his cardiologists report that Mr. Gaetano's CRT-ICD was implanted in September 2017, and over the past year he has not received any shocks or therapies from the defibrillator. His most recent June 2019, ejection fraction was measured between 35 and 40 percent. His cardiologist's letter reports that he is stable from a cardiac standpoint.

Corey Tugwell

Mr. Tugwell is a Class A CDL holder in Oklahoma. A September 2019, letter from Mr. Tugwell's cardiologist reports that his initial ICD implantation was in

July of 2011. His cardiologist reports that Mr. Tugwell has not had syncope for many years, and he has never demonstrated any life-threatening arrhythmias or received appropriate ICD shocks since initial implantation, that he has an ejection fraction of 50–55 percent, and his cardiomyopathy has resolved and his current risk of life-threatening arrhythmias or ICD shocks appears to be very low.

Thomas Daniel Worsley

Mr. Worsley is a commercial motor vehicle driver in Virginia. A July 2019, letter from Mr. Worsley's cardiologist reports that his biventricular pacemaker/ICD was implanted in October 2018, his ejection fraction is 52 percent, he is asymptomatic and physically very active. Mr. Worsley's cardiologist reports that he is at extremely low risk for any sudden cardiac death as he now has a normal ejection fraction and an implantable defibrillator which he states that by recent studies has been shown to work 99 percent of the time.
