

The primary sponsors of this collection and users of these data are the Federal Reserve Board (FRB) and the Defense Logistics Agency (DLA). The FRB uses these data in several ways. First, the capital workweek data is used as an indicator of capital use in the estimation of monthly output (industrial production). Second, the workweek data is used to improve the projections of labor productivity that are used to align industrial production (IP) with comprehensive benchmark information in the Manufacturing Sector of the Economic Census and the Annual Survey of Manufactures. Third, the utilization rate data assists in the assessment of recent changes in IP, as most of the high-frequency movement in utilization rates reflect production changes rather than capacity changes. Fourth, the time series of utilization rate data for each industry, in combination with the FRB IP data, is used to estimate current and historical measures of capacity consistent with the FRB production measures. The DLA uses these data to assess readiness to meet demand for goods under selected national emergency scenarios.

II. Method of Collection

The Census Bureau mails letters to respondents instructing them how to report electronically. Companies are asked to respond within 20 days of the initial mailing. The due date will be imprinted at the top of the letter. A reminder email is sent a week before the due date to delinquent respondents. Letters encouraging participation are mailed to companies that have not responded by the designated due date. A final email is sent to delinquent respondents with information for reporting online. Lastly, we will conduct a telephone follow-up.
