

A mail survey of all anglers within a household will be used to collect recent fishing effort data including gear and methods of fishing from shore. The main purpose will be to compare to on-site roving counts of shore fishing effort during the same period and to produce adjustment factors for under-coverage of the roving on-site survey (the roving effort survey does not require response from the public). The survey scope is Oahu, during a single 2-month sampling wave (current schedule July–Aug, 2014). The effort surveys will use catch data from the ongoing shore angler intercept survey to produce estimates of total catch, harvested catch, and live released catch.
