The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed. II. Background

The NRC issues SFST-ISGs to communicate insights and lessons learned and to address emergent issues not covered in SFST Standard Review Plans (SRPs). In this way, the NRC staff and stakeholders may use the guidance in an SFST-ISG document before it is incorporated into a formal SRP revision.

The NRC staff has developed draft SFST-ISG-8, Revision 3 to (a) incorporate the results of burnup credit criticality safety research performed since the last SFST-ISG-8 revision in 2002 into the limits for the licensing basis, (b) provide recommendations regarding advanced isotopic depletion and criticality code validation techniques, (c) provide recommendations regarding credit for fission product neutron absorbing nuclides in the criticality analysis for SNF systems, (d) add a recommendation for an optional misload analysis coupled with additional administrative SNF system loading procedures, in lieu of a direct burnup measurement, and (e) make miscellaneous and editorial changes.

Proposed Action

By this action, the NRC is requesting public comments on draft SFST-ISG-8, Revision 3. This SFST-ISG proposes certain revisions to NRC guidance on implementation of the requirements in Title 10, Parts 71 and 72, of the Code of Federal Regulations. The NRC staff will make a final determination regarding issuance of the SFST-ISG after it considers any public comments received in response to this request.

Dated at Rockville, Maryland, this 19th day of April 2012.

For the Nuclear Regulatory Commission.

Brooke D. Poole,

Acting Director, Division of Spent Fuel Storage and Transportation, Office of Nuclear Material Safety and Safeguards.
