Need for Change: The Grasslands Plan revision needs to:

—Better address the unique, local conditions and historic natural processes of each of the Grassland's ecosystems.

- Include more adaptive management approaches for emerging vegetation issues, such as invasive plants, the effects of climate change, and managing wildland fire in a checkerboard land ownership pattern.
- Evaluate the at-risk species relationships to associated ecosystems on the Grasslands and determine the need for species-specific management direction.
- Identify management strategies that address the recreation opportunities and challenges on the Grasslands and that support the sustainability of local communities.
- Identify areas of high scenic quality and develop management objectives based on the distinguishing features of the Grassland's scenery.
- Use the Travel Analysis Process to assist in developing the long-term goals and objectives that will guide future road designation and maintenance on the Grasslands for administrative and public purposes.
- Evaluate the suitability of the Canadian River Potential Wilderness Area (Mills Canyon) for a Wilderness designation and provide direction that protects the unique features of this area.
- Address the unique management considerations for existing special areas, including eligible Scenic Rivers, Historic Trails and Scenic Byways.
- Address the future impacts and suitability of renewable energy production on and around the Grasslands, particularly wind energy development.
- Provide management direction for oil and gas operations from the drilling and construction phase through site rehabilitation.
