DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

49 CFR Parts 382 and 391

[Docket No. FMCSA-2011-0073]

RIN 2126-AB35

Harmonizing Schedule I Drug Requirements

AGENCY: Federal Motor Carrier Safety Administration, DOT. **ACTION:** Final rule: correction.

SUMMARY: The Federal Motor Carrier Safety Administration (FMCSA) is correcting a Final Rule that appeared in the **Federal Register** on January 30, 2012 (77 FR 4479), which amended the physical qualifications for drivers and the instructions for the medical examination report to clarify that drivers may not use Schedule I drugs and be qualified to drive commercial motor vehicles (CMVs) under any circumstances.

DATES: Effective February 22, 2012. **FOR FURTHER INFORMATION CONTACT:** If you have questions on this rule, call or e-mail Angela Ward, Nurse Consultant, Medical Programs Office, Federal Motor Carrier Safety Administration, telephone: 202–366–3109; email: *angela.ward@dot.gov.*

SUPPLEMENTARY INFORMATION: FMCSA's recent rule harmonizing Schedule I drug requirements included several changes

to the Instructions to the Medical Examination Report for Commercial Driver Fitness Determination, form 649– F (6045). Although no changes were to be made to the form itself, due to a printing error, several changes were inadvertently made. The following correction reverses those changes.

In FR Doc. 2012–1905 appearing on page 4483 in the **Federal Register** of Monday, January 30, 2012, in Instruction 8, correct the form in § 391.43(f) to read as follows:

§ 391.43 Medical examination; certificate of physical examination.

PHYSICAL EXAMINATION Height: (in.) Weight: (lbs.) Name: Last,

7.

Middle,

First,

The presence of a certain condition may not necessarily disqualify a driver, particularly if the condition is controlled adequately, is not likely to worsen or is readily amenable to treatment. Even if a condition does not disqualify a driver, the medical examiner may consider deferring the driver temporarily. Also, the driver should be advised to take the necessary steps to correct the condition as soon as possible particularly if the condition, if neglected, could result in more serious illness that might affect driving.

Check YES if there are any abnormalities. Check NO if the body system is normal. Discuss any YES answers in detail in the space below, and indicate whether it would affect the driver's ability to operate a commercial motor vehicle safely. Enter applicable item number before each comment. If organic disease is present, note that it has been compensated for. See *Instructions to the Medical Examiner* for guidance.

te type of driving that they do. Some of the main types of ers drive 9-11 hours and then have at least a 10-hour off- 5-hour driving periods and 5-hour rest periods.) chedules, which may result in irregular sleep patterns and a tin lack of social support; tight pickup and delivery use delays and lead to hurriedly loading or unloading mes in temperature. Transporting passengers or hazardous responsibilities are: coupling and uncoupling trailer(s) from 'freight after sitting for a long period of time without any 'freight after sitting for a long period of time without any y to maintain a crouching position to inspect the underside ills to make quick decisions, when necessary, and the e in crowded areas.	have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz and 2,000 Hz with or without a hearing device when the audiometric device is calibrated to the American National Standard (formerly ASA Standard) Z24.5-1951; (12)(i) Does not use any drug or substance identified in 21 CFR 1308.11 Schedule I, an amphetamine, a narcotic, or other habit-forming drug. (ii) Does not use any non-Schedule I drug or substance that is identified in the other Schedules in 21 part 1308 except when the use is prescribed by a licensed medical practitioner, as defined in § 382.107, who is familiar with the driver's medical history and has advised the driver that the substance will not adversely affect the driver's ability to safely operate a commercial motor vehicle. (13) Has no current clinical diagnosis of alcoholism.
Responsibilities, work schedules, physical and emotional demands, and lifestyles among commercial drivers vary by the type of driving that they do. Some of the main types of drivers include the following: turn around or short relay (drivers return to their home base each evening); long relay (drivers drive 9-11 hours and then have at least a 10-hour off-duty period), straight through haul (cross country drivers); and team drivers (drivers share the driving by alternating their 5-hour driving periods and 5-hour rest periods.) The following: turn around or short relay (drivers (drivers share the driving by alternating their 5-hour driving periods and 5-hour rest periods.) The following factors may be involved in a driver's performance of duties: abrupt schedule changes and rotating work schedules, which may result in irregular sleep patterns and a The following factors may be trade of time away from family and friends, which may result in lack of social support; tight pickup and delivery schedules, with irregular sleep patterns, adverse road, weather and traffic conditions, which may cause delays and lead to hurriedly loading or unloading cargo in order to compensate for the lost time; and environmental conditions such as excessive vibration, noise, and extiners in temperature. Transporting parsengers or hazardous materials may add to the demands on the commercial driver. There may be duties in addition to the driving taxifer and vibration, noise, and exitors and so the tractor and/or trailer(s) from materials may add to the demands on the commercial driver. There may be duties in addition to the driven addition trailer(s) before, during and after delivery of cargo; lifting, installing, and renoving heavy time that tractor and/or trailer(s) before, during and addrosp, the ability to maintain a crouching postion to inspect the underside of the vehicle, frequent entering and exite and adjity to climb ladders on the tractor and/or trailer(s). In addition, a driver must have the perceptual skills to monitor a some ti	of a respiratory dysfunction likely to interfere with his ability to control and drive a commercial motor vehicle safely. (6) Has no current clinical diagnosis of high blood pressure likely to interfere with his ability to operate a commercial motor vehicle safely. (7) Has no established medical history or clinical diagnosis of rheumatic, arthritic, orthopedic, muscular, neuromuscular, or vascular disease which interferes with his ability to control and operate a commercial motor vehicle safely. (8) Has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a commercial motor vehicle; (9) Has no mental, nervous, organic, or functional disease or psychiatric disorder likely to interfere with his ability to drive a commercial motor vehicle safely; (10) Has distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses, field of vision of at least 20/40 (Snellen) in each eye with or without corrective lenses, field of vision of at least 70degrees in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing standard red, green and amber; (11) First perceives a forced whispered voice in the better ear not less than 5 feet with or without the use of a hearing aid, or, if tested by use of an audiometric device, does not
Responsibilities, work schedules, physical and emotional drivers include the following: turn around or short relay (dri duty period), straight through haul (cross country drivers); an The following factors may be involved in a driver's perforn driver beginning a trip in a fatigued condition; long hours; er schedules, with irregularity in work, rest, and eating patterns cargo in order to compensate for the lost time; and environm materials may add to the demands on the commercial driver. There may be duties in addition to the driving task for whi the tractor, loading and unloading trailer(s) (sometimes a dri stretching period); inspecting the operating condition of tract lifting heavy tarpaulins to cover open top trailers. The above of the vehicle, frequent entering and exiting of the cab, and t In addition, a driver must have the perceptual skills to mor manipulative skills to control an oversize steering wheel, shi	 §391.41 PHYSICAL QUALIFICATIONS FOR DRIVERS (a) A person shall not drive a commercial motor vehicle unless he is physically qualified to do so and, except as provided in §391.67, has on his person the original, or a photographic copy, of a medical examiner's certificate that he is physically qualified to drive a motor vehicle. (b) A person is physically qualified to drive a motor vehicle if that person: (1) Has no loss of a foot, a leg, a hand, or an arm, or has been granted a Skill Performance Evaluation (SPE) Certificate (formerly Limb Waiver Program) pursuant to \$391.49. (2) Has no impairment of: (i) A hand or finger which interferes with prehension or power grasping; or (ii) An arm, foot, or leg which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or has been granted a SPE Certificate pursuant to \$391.49. (3) Has no established medical history or clinical diagnosis of diabetes mellitus currently requiring insulin for control; (4) Has no current clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis, or any other cardiovascular disease of a variety known to be accompanied by syncope, dyspnea, collapse, or congestive cardiac failure.

General Information

A person is physically qualified to drive a commercial motor vehicle if that person: granted a Skill Performance Evaluation (SPE) Certificate Has no loss of a foot, leg, hand or an arm, or has been pursuant to Section 391.49. Loss of Limb: §391.41(b)(1) commerce according to the requirements in 49 CFR 391.41-49. Therefore, the medical examiner must be knowledgeable of these requirements and making the qualification determination. The medical examiner should be qualification to operate a commercial motor vehicle (CMV) in interstate guidelines developed by the FMCSA to assist the medical examiner in familiar with the driver's responsibilities and work environment and is purpose of this examination is to determine a driver's physical referred to the section on the form, The Driver's Role.

common prescriptions and over-the-counter medications relative to the side to read warning labels on all medications. History of certain conditions may conducting the physical examination, the medical examiner should discuss effects and hazards of these medications while driving. Educate the driver be cause for rejection, particularly if required by regulation, or may indicate perhaps by a medical specialist. These decisions are usually made by the medical examiner in light of the driver's job responsibilities, work schedule In addition to reviewing the Health History section with the driver and the need for additional laboratory tests or more stringent examination and potential for the conditions to render the driver unsafe.

with prehension or power grasping; or (ii) An arm, foot, or leg which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or (iii) Any other significant limb defect or limitation which interferes

Has no impairment of: (i) A hand or finger which interferes

vehicle if that person:

Limb Impairment:

§391.41(b)(2)

A person is physically qualified to drive a commercial motor

condition, if neglected, could develop into a serious illness that could affect Medical conditions should be recorded even if they are not cause for appropriate remedial care. This advice is especially needed when a denial, and they should be discussed with the driver to encourage driving.

regulations, the certificate is valid for two years, unless the driver has medical examiner signs the medical certificate which the driver must carry If the medical examiner determines that the driver is fit to drive and is also able to perform non-driving responsibilities as may be required, the a medical condition that does not prohibit driving but does require should be issued for a shorter length of time. The physical examination should be done carefully and at least as complete as is indicated by the information (a vision exemption, qualifying drivers under 49 CFR 391.64 more frequent monitoring. In such situations, the medical certificate with his/her license. The certificate must be dated. Under current attached form. Contact the FMCSA at (202) 366-1790 for further etc.).

Interpretation of Medical Standards

(FMCSA) has published recommendations called Advisory Criteria to help qualifications for commercial driving. These recommendations have been condensed to provide information to medical examiners that (1) is directly relevant to the physical examination and (2) is not already included in the medical examination form. The specific regulation is printed in italics and medical examiners in determining whether a driver meets the physical commercial drivers, the Federal Motor Carrier Safety Administration Since the issuance of the regulations for physical qualifications of it's reference by section is highlighted

Federal Motor Carrier Safety Regulations -Advisory Criteria-

§391.41(b)(3) Diabetes

A person is physically qualified to drive a commercial motor Has no established medical history or clinical diagnosis of vehicle if that person:

and space. Individuals who require insulin for control have Diabetes mellitus is a disease which, on occasion, can much or too little insulin, or food intake not consistent with (drowsiness, semiconsciousness, diabetic coma or insulin result in a loss of consciousness or disorientation in time conditions which can get out of control by the use of too symptoms of hyperglycemic or hypoglycemic reactions diabetes mellitus currently requiring insulin for control. the insulin dosage. Incapacitation may occur from shock).

alcohol sponge and a sterile technique. Factors related to the FMCSA has consistently held that a diabetic who uses long-haul commercial motor vehicle operations, such as stress, and concomitant illness, compound the dangers, insulin for control does not meet the minimum physical complicated process requiring insulin, syringe, needle, fatigue, lack of sleep, poor diet, emotional conditions, ത The administration of insulin is, within itself, requirements of the FMCSRs.

prescribed for diabetic individuals to help stimulate natural controlled by the use of oral medication and diet, then an may call (202) 366-1790 for an application for a diabetes individual may be qualified under the present rule. CMV drivers who do not meet the Federal diabetes standard Hypoglycemic drugs, taken orally, are sometimes body production of insulin. If the condition can be exemption

interest

specifically designed to encompass: "a clinical diagnosis cardiovascular condition which has not fully stabilized The term "has no current clinical diagnosis of" is regardless of the time limit The term "known to be of" (1) a current cardiovascular condition, or (2) a cardiac failure.

It is the intent of the FMC-SYS to render unquanteed, a driver who has a current cardiovascular disease which is accompanied by and/or likely to cause symptoms of syncope, dyspnea, collapse, or congestive cardiac failure. However, the subjective decision of whether the nature and severity of an individual's condition will likely cause symptoms of cardiovascular insufficiency is on an individual basis and qualification rests with the medical examiner and basis and qualification rests with the medical examiner and the motor carrier. In those cases where there is an occurrence of cardiovascular insufficiency (myocardial infarction, thrombosis, etc.), it is suggested before a driver is certified that he or she have a normal resting and stress electrocardiogram (ECG), no residual complications and no physical limitations, and is taking no medication likely to interfere with safe driving.

Coronary artery bypass surgery and pacemaker implantation are remedial procedures and thus, not unqualitying the protectures and thus. In the unqualitying due to risk of syncope. Counadin is a medical treatment which can improve the health and safety of the driver and should not, by its use, medically disqualify the commercial driver. The emphasis should be on the underlying medical condition(s) which require treatment and the general health of the driver. The FMCSA should be contacted at (202) 366-1790 for additional recommendations regarding the physical qualification of drivers on coumadin. (See Cardiovasular Advisory Panel Guidelines for the

(See Cardiovasular Advisory Panel Guidelines for the Medical examination of Commercial Motor Vehicle Drivers at: http://www.fmcsa.dot.gov/rulesregs/medreports.htm)

Respiratory Dysfunction §391.41(b)(5)

A person is physically qualified to drive a commercial motor vehicle if that person:

Has no established medical history or clinical diagnosis of a Has no established medical history or clinical diagnosis of a Respiratory dystunction likely to interfere with ability to control and drive a commercial motor vehicle safely.

Since a driver must be alert at all times, any change in his or her mental state is in direct conflict with highway safety. Even the slightest impairment in respiratory function under emergency conditions (when greater oxygen supply is necessary for performance) may be detrimental to safe driving.

There are many conditions that interfere with oxygen exchange and may result in incapacitation, including emphysema, chronic asthma, carcinoma, tuberculosis, chronic bronchitts and sleep apnea. If the medical examiner detects a respiratory dysfunction, that in any way is likely to interfere with the driver's ability to safely control and drive a commercial motor vehicle, the driver must be referred to a specialist for further evaluation and therapy. Anticoagulation thromboembolism is not unqualifying once optimum dose is achieved, provided lower extremity venous examinations remain normal and the reating physician grees a favorable recommendation.

(See Conference on Pulmonary/Respiratory Disorders and Commercial Drivers at: http://www.fmcsa.dot.gov/rulesregs/medreports.htm

Hypertension

§391.41(b)(6) A person is physically qualified to drive a commercial motor vehicle if that person:

Has no current clinical diagnosis of high blood pressure likely to interfere with ability to operate a commercial motor vehicle safely. Hypertension alone is unlikely to cause sudden collapse;

inverting the line of the summer of the summ

Cardiovascular Advisory Guidelines for the Examination of CMV Drivers, which used the Sixth Report of the Joint National Committee on Detection, Evaluation, and

Treatment of High Blood Pressure (1997). Stage 1 hypertension corresponds to a systolic BP of 140-150 mmHor and/or a cliastolic RP of 90-90 mmHor The driv

140-159 mmHg and/or a diastolic BP of 90-99 mmHg. The driver with a BP in this range is at low risk for hypertension-related acute incapacitation and may be medically certified to drive for a one-year period. Certification examinations should be done annually thereafter and

Continuation examinations should be done antranity increates should be at or less than 140/90. If less than 160/100, certification may be extended one time for 3 months. A blood pressure of 160-179 systolic and/or 100-109 diast

A blood pressure of 160-179 systolic and/or 100-109 diastolic is considered Stage 2 hypertension, and the driver is not necessarily unqualified during evaluation and institution of treatment. The driver is given a one time certification of three months to reduce his or her blood pressure to less than or equal to 140/90. A blood pressure in this range is an absolute indication for anti-hypertensive drug threngy. Provided treatment is well tolerated and the driver demonstry for one year from date of the initial exam. The driver is certified for one year from date of the initial exam. The driver is certified annually thereafter.

A blood pressure at or greater than 180 (systolic) and 110 (diastolic) is considered Stage 3, high risk for an acute BP-related event. The driver may **not** be qualified, even temporarily, until reduced to 140/90 or less and treatment is well tolerated. The driver may be certified for 6 months and biannually (every 6 months) thereafter if at recheck BP is 140/90 or less.

Annual recertification is recommended if the medical examiner does not know the severity of hypertension prior to treatment.

An elevated blood pressure finding should be confirmed by at least two subsequent measurements on different days.

Treatment includes nonpharmacion on untern usystematics Treatment includes nonpharmacologic and pharmacologic modalities as well as counseling to reduce other risk factors. Most antihypertensive medications also have side effects, the importance of which must be judged on an individual basis. Individuals must be alerted to the hazards of these medications while driving. Side effects of somnolence or syncope are particularly undesirable in commecial drivers.

Secondary hypertension is based on the above stages. Evaluation is warranted if patient is persistently hypertensive

on maximal or near-maximal doses of 2-3 pharmacologic agents. Some causes of secondary hypertension may be amenable to surgical intervention or specific pharmacologic disease. (See Cardiovascular Advisory Panel Guidelines for the Medical Examination of Commercial Motor Vehicle Drivers at: http://www.fmcsa.dot.gov/rules.regs/medreports.htm)

Rheumatic, Arthritic, Orthopedic, Muscular, Neuromuscular or Vascular Disease §391.41(b)(7)

A person is physically qualified to drive a commercial motor vehicle if that person: Has no established medical history or clinical diagnosis of rheumatic, arthritic orthonadic muscular neuromuscular or vascular disease

The sine exclusion environment insolve to minute angle rous of meutation, interfitting, officient of the ability to control and operate a commercial which interferes with the ability to control and operate a commercial motor vehicle safety.

Certain diseases are known to have acute episodes of transient muscle weakness, poor muscular coordination (ataxia), abnormal sensations (paresthesia), decreased muscular tone (hypotonia), visual disturbances and pain which may be suddenly incapacitating. With each recurring episode, these symptoms may become more pronounced and remain for longer periods of time. Other diseases have more insidious onsets and display symptoms of muscle wasting (atrophy), swelling and paresthesia which may not suddenly incapacitate a person but may restrict his/her movements and eventually interfere with the ability to safely operate a motor vehicle. In many instances these diseases are degenerative in nature or may result in deterioration of the involved area.

Conce the individual has been diagnosed as having a rheumatic, Once the individual has been diagnosed as having a rheumatic, arthritic, orthopedic, muscular, neuromuscular or vascular disease, then he/she has an established history of that disease. The physician when examining an individual, should consider the following: (1) the nature and severity of the individual's condition (such as sensory loss or loss of strength); (2) the degree of limitation present (such as range of motion); (3) the likelihood of progressive limitation for always present initially but may manifest itself over time); and (4) the likelihood of sudden incapacitation. If severe functional impairment exists, the driver does not qualify. In cases where more frequent monitoring is required, a certificate for a shorter period of time may be issued. (See Conference on Neurological Disorders and Commercial Diviens at

http://www.fmcsa.dot.gov/rulesregs/medreports.htm)

person is physically qualified to drive a commercial motor vehicle if that person

Has no established medical history or clinical diagnosis of epilepsy consciousness or any loss of ability to control a motor vehicle. Epilepsy is a chronic functional disease characterized by or any other condition which is likely to cause loss of

seizures or episodes that occur without warning, resulting in loss of Therefore, the following drivers cannot be qualified: (1) a driver who has a medical history of epilepsy; (2) a driver who has a voluntary control which may lead to loss of consciousness and/or current clinical diagnosis of epilepsy; or (3) a driver who is taking antiseizure medication seizures.

person's condition will likely cause loss of consciousness or loss of negative and antiseizure medication is not required, then the driver seizure or loss of consciousness of unknown cause which did not ability to control a motor vehicle is made on an individual basis by waiting period elapse from the time of the episode. Following the waiting period, it is suggested that the individual have a complete Before certification is considered, it is suggested that a 6 month the medical examiner in consultation with the treating physician require antiseizure medication, the decision as to whether that neurological examination. If the results of the examination are If an individual has had a sudden episode of a nonepileptic may be qualified.

from that condition and has no existing residual complications, and certification should be deferred until the driver has fully recovered In those individual cases where a driver has a seizure or an infectious disease, dehydration or acute metabolic disturbance) medical condition (e.g., drug reaction, high temperature, acute episode of loss of consciousness that resulted from a known not taking antiseizure medication.

medication and seizure-free for 10 years may be qualified to drive a CMV in interstate commerce. Interstate drivers with a history of interstate commerce if seizure-free and off antiseizure medication a single unprovoked seizure may be qualified to drive a CMV in Drivers with a history of epilepsy/seizures off antiseizure for a 5-year period or more.

RIN 6048-XB024

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Catcher Vessels Less Than 60 Feet (18.3 Meters) Length Overall Using Hook-and-Line or Pot Gear in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for Pacific cod by catcher vessels less than 60 feet (18.3 meters (m)) length overall (LOA) using hook-and-line or pot gear in the Bering Sea and Aleutian Islands management area (BSAI). This action is necessary to prevent exceeding the 2012 Pacific cod total allowable catch (TAC) specified for catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear in the BSAI. **DATES:** Effective 1200 hrs, Alaska local time (A.l.t.), February 17, 2012, through 2400 hrs, A.l.t., December 31, 2012.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2012 Pacific cod TAC allocated as a directed fishing allowance to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear in the BSAI is 4,645 metric tons as established by the final 2011 and 2012 harvest specifications for groundfish in the BSAI (76 FR 11139, March 1, 2011) and inseason adjustment (76 FR 81875, December 29, 2011).

In accordance with § 679.20(d)(1)(iii), the Administrator, Alaska Region, NMFS, has determined that the 2012 Pacific cod TAC allocated as a directed fishing allowance to catcher vessels less than 60 feet (18.3 m) LOA using hookand-line or pot gear in the BSAI has been reached. Consequently, NMFS is prohibiting directed fishing for Pacific cod by catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear in the BSAI.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of Pacific cod by catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear in the BSAI. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of February 15, 2012.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 et seq.

Dated: February 16, 2012.

Carrie Selberg,
