

full scale range between 0–50 ppm, at any operating temperature from 20 °C to 30 °C, using a back-flushing GC scrubber, 99.9999% nitrogen carrier gas at a gas pressure of 60–80 psig, with a column temperature of 105 °C, and a detector temperature of 265 °C; inlet flow of 20–100 mL/min; in accordance with the associated instrument manual, and with or without any of the following options: Rack mount kit, internal sample pump, 4–20 mA output module, particle filter, and data collection software.

The application for equivalent method determination for the CO method was received by the Office of Research and Development on January 3, 2011. This monitor is commercially available from the applicant, Peak Laboratories, LLC, 2330 Old Middlefield Way Suite 10, Mountain View, CA 94043.

One new O₃ equivalent method is an automated monitoring method (analyzer) utilizing a measurement principle based on ultraviolet absorption photometry. The newly designated equivalent method is identified as follows:

EQOA–0914–218, “2B Technologies Model 106–L or OEM–106–L Ozone Monitor” operated in a range of 0–0.5 ppm in an environment of 20–30 °C, with temperature and pressure compensation, internal dewLine for humidity control, using a 1 minute average, with a 12V DC source supplied by a 100–240V AC power adapter, operated according to the Model 106 Ozone Monitor Operation Manual and with or without the following: Cigarette lighter adapter or a 12V DC battery for portable operation, external PTFE or PVDF inlet filter and holder, USB data port with computer cable.

The application for equivalent method determination for the O₃ method was received by the Office of Research and Development on June 24, 2014. This monitor is commercially available from the applicant, 2B Technology, Inc., 2100 Central Ave., Suite 105, Boulder, CO 80303.

Test monitors representative of these methods have been tested in accordance with the applicable test procedures specified in 40 CFR part 53, as amended on August 31, 2011. After reviewing the results of those tests and other information submitted in the application, EPA has determined, in accordance with part 53, that these methods should be designated as equivalent methods.

As designated reference and equivalent methods, these methods are acceptable for use by states and other air monitoring agencies under the

requirements of 40 CFR part 58, Ambient Air Quality Surveillance. For such purposes, the methods must be used in strict accordance with the operation or instruction manual associated with the method and subject to any specifications and limitations (e.g., configuration or operational settings) specified in the applicable designated method description (see the identification of the method above).

Use of the methods also should be in general accordance with the guidance and recommendations of applicable sections of the “Quality Assurance Handbook for Air Pollution Measurement Systems, Volume I,” EPA/600/R–94/038a and “Quality Assurance Handbook for Air Pollution Measurement Systems, Volume II, Ambient Air Quality Monitoring Program” EPA–454/B–08–003, December, 2008. Provisions concerning modification of such methods by users are specified under Section 2.8 (Modifications of Methods by Users) of Appendix C to 40 CFR part 58.

Consistent or repeated noncompliance should be reported to: Director, Human Exposure and Atmospheric Sciences Division (MD–E205–01), National Exposure Research Laboratory, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711.

Designation of these reference and equivalent methods is intended to assist the States in establishing and operating their air quality surveillance systems under 40 CFR part 58. Questions concerning the commercial availability or technical aspects of the method should be directed to the applicant.

Dated: October 24, 2014.

SUPPLEMENTARY INFORMATION:

General Information

The U.S. Environmental Protection Agency (EPA) plans to create a Privacy Act system of records for the Labor and Employee Relations Information System (LERIS). LERIS will be used by LER Specialists, personnel or labor attorneys in the Office of Regional Counsel and EPA headquarters, LER attorneys in the EPA headquarters, and attorneys in the Office of General Counsel for the processing of grievances, demands to bargain, information requests and unfair labor practices filed by unions on behalf of their bargaining unit members, and processing disciplinary actions or performance-based actions against employees for misconduct or deficient job performance. LERIS will enable LER employees to access case information across the Agency for use in determining appropriate disciplinary penalties when those grievances, complaints, unfair labor practices or disciplinary actions lead to formal

judicial or administrative hearings before a judge. The system will also report trends in LER issues.

The implementation of LERIS will have no effect on the privacy of individuals. The system is password-protected and access is restricted to Agency Human Resources (HR) specialists and legal staff who have a work-related need to utilize the information in the system. Permission-level assignments allow users access only to those functions for which they are authorized. All records are maintained in secure, access-controlled areas or buildings. The system is accessed from an internet browser using the Agency's secured portal and requires a user to have an established log-in name and password.

The system is maintained at a contractor's Xiolink facility in St. Louis, Missouri. LERIS is maintained by the Office of Human Resources, Labor and Employee Relations Division.

Dated: September 23, 2014.

Renee P. Wynn,

Acting Assistant Administrator and Chief Information Officer.
