

Heavy Equipment, Produce, Intermodal, Passenger, Refrigerated (non-produce), Tank Carriers and Bulk Materials Carriers. Each commodity segment was subdivided into its for-hire and private components, and each of the 30 segments was evaluated on recent crash, vehicle, driver and safety management factors. The third analysis combined the financial and safety performance data from the first two analyses to create a profile of the financial and safety performance relationship. Correlation coefficients were calculated for various financial-safety performance measures, and each correlation coefficient was calculated for various financial-safety performance measures and tested for its statistical significance. Phase 1 results are located on the FMCSA Analysis and Information (A&I) online Web site (<http://ai.fmcsa.dot.gov>) under "Analysis Results and Reports."

The safety performance results from Phase 1 provided the basis for Phase 2 of this study (also complete).

Phase 2 of the study is an investigation of the safety programs, policies, and procedures undertaken by safety leaders in each commodity segment (commonly known as the "Best Practices" Study). Phase 2 included individual interviews with several safety leaders in each segment. Detailed information was collected on driver screening and hiring practices, pre-service and in-service training procedures, incentive awards programs and vehicle maintenance policies. Phase 2 results are also located on FMCSA's A&I Web site (<http://ai.fmcsa.dot.gov>) under Analysis Results and Reports."

Phase 3: Results from Phase 2 are being shared with FMCSA safety investigators and disseminated to many carriers within the industry, including new entrants and poor performers. Specifically, copies of the "Best Practices" final report were provided to national-level industry associations and FMCSA field offices. Summarized brochures have been developed for distribution to the associations, FMCSA field offices, and new entrants upon initial registration with FMCSA. The hope is that these new motor carriers will incorporate these practices into their own safety management programs while they are still in the development stage. Additionally, FMCSA hopes to incorporate the results in material provided at compliance reviews, so that carriers who rate poorly have access to specific, concrete examples of how to revise or improve their safety management programs.

As part of Phase 3, FMCSA and the University of Maryland will seek more detailed information from the motor

carrier industry on how technology is being used to improve safety management. FMCSA and the University of Maryland propose to send questionnaires to approximately 1,000 of the largest for-hire and private carriers in the United States. The University of Maryland will also post the questionnaires on-line so that the selected carriers can complete the survey via the Internet, if desired.

Respondents: The total number of respondents is 1,000. The respondents will be the ten largest for-hire and private motor carriers in each State.

Average Burden Per Response: The estimated average burden per response is 45 minutes. Estimated Total Annual Burden: The estimated total annual burden is 750 hours (1,000 questionnaires interviews \times 45 minutes per response/60 minutes = 750 hours).

Frequency: Once.

Public Comments Invited: Interested parties are invited to send comments regarding any aspect of this information collection, including, but not limited to: (1) The necessity and utility of the information collection for the proper performance of the functions of the FMCSA; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB clearance of this information collection.
