

DEPARTMENT OF THE INTERIOR**National Park Service****Notice of Inventory Completion for Native American Human Remains and Associated Funerary Objects in the Possession of the Department of Anthropology, San Francisco State University, San Francisco, CA****AGENCY:** National Park Service, Interior.**ACTION:** Notice.

Notice is hereby given in accordance with provisions of the Native American Graves Protection and Repatriation Act (NAGPRA), 43 CFR 10.9, of the completion of an inventory of human remains and associated funerary objects in the possession of the Department of Anthropology, San Francisco State University, San Francisco, CA.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 43 CFR 10.2 (c). The determinations within this notice are the sole responsibility of the museum, institution, or Federal agency that has control of these Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations within this notice.

A detailed assessment of the human remains was made by the Department of Anthropology, San Francisco State University professional staff in consultation with representatives of the United Auburn Indian Community, the Washoe Tribe of Nevada & California, and the Mooretown Rancheria of Maidu Indians of California.

In 1964, human remains representing five individuals were recovered from CA-PLA-17, a site near Ophir, CA, that was excavated by San Francisco State University as part of the Middle Fork American River project. No known individuals were identified. The seven associated funerary objects are flaked stone, ground stone, shell, and quartz crystals.

Archeological evidence, geographic location, historical documentation, and oral history records indicate that these human remains and associated funerary objects are Native American and are reasonably believed to be associated with the Maidu Indians. The typology of the basalt projectile points recovered from the site links them with the archeological Martis culture, a predecessor of the Maidu/Nisenan cultural group. Historical documents indicate that the Maidu people have occupied this area of California since the period of Euro-American contact,

and oral history records presented during consultation support this affiliation.

Based on the above-mentioned information, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (d)(1), the human remains listed above represent the physical remains of five individuals of Native American ancestry. Officials of the Department of Anthropology, San Francisco State University also have determined that, pursuant to 43 CFR 10.2 (d)(2), the seven objects listed above are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony. Lastly, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (e), there is a relationship of shared group identity that can be reasonably traced between these Native American human remains and associated funerary objects and the United Auburn Indian Community, the Washoe Tribe of Nevada & California, and the Mooretown Rancheria of Maidu Indians of California.

This notice has been sent to officials of the United Auburn Indian Community, the Washoe Tribe of Nevada & California, and the Mooretown Rancheria of Maidu Indians of California. Representatives of any other Indian tribe that believes itself to be culturally affiliated with these human remains and associated funerary objects should contact Jeff Fentress, NAGPRA Coordinator, Department of Anthropology, San Francisco State University, 1600 Holloway Avenue, San Francisco, CA 94132, telephone (415) 338-2046, before January 22, 2001. Repatriation of the human remains and associated funerary objects to the United Auburn Indian Community, the Washoe Tribe of Nevada & California, and the Mooretown Rancheria of Maidu Indians of California may begin after that date if no additional claimants come forward.

Dated: December 14, 2000.

John Robbins,

Assistant Director, Cultural Resources Stewardship and Partnerships.

DEPARTMENT OF THE INTERIOR**National Park Service****Notice of Inventory Completion for Native American Human Remains and Associated Funerary Objects in the Possession of the Department of Anthropology, San Francisco State University, San Francisco, CA****AGENCY:** National Park Service, Interior.**ACTION:** Notice.

Notice is hereby given in accordance with provisions of the Native American Graves Protection and Repatriation Act (NAGPRA), 43 CFR 10.9, of the completion of an inventory of human remains and associated funerary objects in the possession of the Department of Anthropology, San Francisco State University, San Francisco, CA.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 43 CFR 10.2 (c). The determinations within this notice are the sole responsibility of the museum, institution, or Federal agency that has control of these Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations within this notice.

A detailed assessment of the human remains was made by the Department of Anthropology, San Francisco State University professional staff in consultation with representatives of the Round Valley Indian Tribes of the Round Valley Reservation, California.

In 1966, human remains representing one individual were recovered from CA-MEN-748, a site located in Williams Valley, CA, that was excavated by San Francisco State University during the Etsel-Franciscan Reservoir Project. No known individual was identified. The 11 associated funerary objects are *olivella* beads, trade beads, and chert flakes.

The geographic location of the site and archeological, historical, and oral history evidence indicate that these human remains and associated funerary objects are likely to be Native American and associated with the Yuki Indians. The area of Williams Valley is recognized as being in the historic territory of the Yuki at the time of Euro-American contact. The location of the site on a terrace above a valley is consistent with a contact-period pattern of settlement in which the Yuki relocated to secondary sites after being displaced from their traditional lands. Evidence presented during consultation indicates that the materials recovered

are consistent with Yuki material culture.

Based on the above-mentioned information, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (d)(1), the human remains listed above represent the physical remains of one individual of Native American ancestry. Officials of the Department of Anthropology, San Francisco State University also have determined that, pursuant to 43 CFR 10.2 (d)(2), the 11 objects listed above are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony. Lastly, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (e), there is a relationship of shared group identity that can be reasonably traced between these Native American human remains and associated funerary objects and the Round Valley Indian Tribes of the Round Valley Reservation, California.

This notice has been sent to officials of the Round Valley Indian Tribes of the Round Valley Reservation, California. Representatives of any other Indian tribe that believes itself to be culturally affiliated with these human remains and associated funerary objects should contact Jeff Fentress, NAGPRA Coordinator, Department of Anthropology, San Francisco State University, 1600 Holloway Avenue, San Francisco, CA 94132, telephone (415) 338-2046, before January 22, 2001. Repatriation of the human remains and associated funerary objects to the Round Valley Indian Tribes of the Round Valley Reservation, California may begin after that date if no additional claimants come forward.

Dated: December 14, 2000.

John Robbins,

*Assistant Director, Cultural Resources
Stewardship and Partnerships.*

DEPARTMENT OF THE INTERIOR

National Park Service

Notice of Inventory Completion for Native American Human Remains and Associated Funerary Objects in the Possession of the Department of Anthropology, San Francisco State University, San Francisco, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

Graves Protection and Repatriation Act (NAGPRA), 43 CFR 10.9, of the completion of an inventory of human remains and associated funerary objects in the possession of the Department of Anthropology, San Francisco State University, San Francisco, CA.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 43 CFR 10.2 (c). The determinations within this notice are the sole responsibility of the museum, institution, or Federal agency that has control of these Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations within this notice.

A detailed assessment of the human remains was made by the Department of Anthropology, San Francisco State University professional staff in consultation with representatives of the Central Valley and Mountain Reinterment Association on behalf of Santa Rosa Indian Community of the Santa Rosa Rancheria, California.

In 1968, human remains representing a minimum of one individual were recovered from CA-MAD-UNK, a site located in Madera, CA. Collections documentation indicates that the human remains were recovered by Mr. Pat O'Rourke of the Madera Tribune newspaper and were sent by him to San Francisco State University for curation at an unknown date. No known individual was identified. No associated funerary objects are present.

This individual is identified as Native American based on geographic, historical, and oral history evidence. The site is located in the historic territory of the Northern Valley Yokuts Indians, occupied by them at the time of Euro-American contact. Oral history evidence presented during consultation indicates that there is an association between the Yokuts and the present-day Santa Rosa Indian Community of the Santa Rosa Rancheria, California.

In 1968, human remains representing six individuals were recovered from CA-MER-66, located in Dos Palos, CA. Collections documentation indicates that the remains were recovered during archeological excavations conducted by San Francisco State University. No known individuals were identified. The 124 associated funerary objects are charm stones, *haliotis* pendants, bird bone ornaments, bone tools, *olivella* beads, and *tivela* beads.

These individuals are identified as Native American based on geographic, archeological, and oral history evidence. The site is located in the historic territory of the Northern Valley Yokuts

Indians, occupied by them at the time of Euro-American contact. The artifact assemblage is consistent with the Yokuts culture. Oral history evidence presented during consultation indicates that there is an association between the Yokuts and the present-day Santa Rosa Indian Community of the Santa Rosa Rancheria, California.

Around 1962, human remains representing a minimum of two individuals were recovered from CA-STA-133, a site located near Patterson, CA. Collections documentation indicates that the site was recorded in 1962 by Leonard Foote and that the remains were recovered during archeological survey and excavations conducted by students at San Francisco State University. No known individuals were identified. No associated funerary objects are present.

These individuals are identified as Native American based on geographic and oral history evidence. The site is located in the historic territory of the Northern Valley Yokuts Indians, occupied by them at the time of Euro-American contact. Oral history evidence presented during consultation indicates that there is an association between the Yokuts and the present-day Santa Rosa Indian Community of the Santa Rosa Rancheria, California.

Based on the above-mentioned information, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (d)(1), the human remains listed above represent the physical remains of nine individuals of Native American ancestry. Officials of the Department of Anthropology, San Francisco State University also have determined that, pursuant to 43 CFR 10.2 (d)(2), the 124 objects listed above are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony. Lastly, officials of the Department of Anthropology, San Francisco State University have determined that, pursuant to 43 CFR 10.2 (e), there is a relationship of shared group identity that can be reasonably traced between these Native American human remains and associated funerary objects and the Santa Rosa Indian Community of the Santa Rosa Rancheria, California.

This notice has been sent to officials of the Central Valley and Mountain Reinterment Association and the Santa Rosa Indian Community of the Santa Rosa Rancheria, California. Representatives of any other Indian tribe that believes itself to be culturally affiliated with these human remains and associated funerary objects should
