SUPPLEMENTARY INFORMATION: The draft EIS documents the direct, indirect, and cumulative effects to the physical, biological, and socioeconomic environment that may result from various resource management alternatives at Cachuma Lake.

The Cachuma Lake draft EIS evaluates the existing resource management of Cachuma Lake. The project purpose consists of: (1) Protecting the water supply and water quality functions of Cachuma Lake; (2) protecting and enhancing natural and cultural resources in the Recreation Area, consistent with Federal law and Reclamation policies; and (3) providing recreational opportunities and facilities consistent with the original Cachuma Project purposes, and Reclamation policies.

Cachuma Lake is an existing reservoir formed by Bradbury Dam, and located in Santa Barbara County, California. The dam, which provides irrigation, domestic, and municipal and industrial water supplies to the City of Santa Barbara, Goleta Water District, Montecito Water District, Carpinteria Valley Water District, and Santa Ynez River Water Conservation District, was constructed in the 1950s. The Cachuma Project has delivered an average of 25,000 acre-feet per year over the past 45 years and encompasses approximately 9,250 acres. In 1956, operation and maintenance of the Cachuma project was transferred from Reclamation to the Cachuma Operation and Maintenance Board. Reclamation

still retains ownership of all project facilities and is responsible for the operation of the dam.

The new RMP will have a planning horizon of 20 years, which will begin when a new agreement is reached between Reclamation and a local managing partner. The new RMP would (1) Ensure timely delivery of high-quality water to water users while enhancing natural resources and recreational opportunities; (2) provide recreational opportunities to meet the demands of a growing, diverse population; (3) ensure recreational diversity and the quality of the experience; (4) protect natural resources, while providing resource education opportunities and stewardship; and (5) provide updated management for establishing a new management agreement with a managing partner.

The draft EIS outlines the formulation and evaluation of alternatives designed to address issues through a representation of the varied interests at the Plan Area. Alternative 1 (No Action) would continue current management practices. Alternative 2 (Enhanced Recreation) would balance natural resource protection with recreational opportunities. Alternative 3 (Expanded Recreation) would emphasize expanded recreation opportunities.

The draft EIS has been developed within the authorities provided by Congress through the Reclamation Recreation Management Act of 1992 (Pub. L. 102-575, Title 28, 16 U.S.C. 460L), Reclamation Act, Federal Water Project Recreation Act, and other applicable Federal agency and U.S. Department of the Interior policies.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Epperson, Bureau of Reclamation, at 559-269-4518 (TDD 559-487-5933) or repperson@mp.usbr.gov.

SUPPLEMENTARY INFORMATION: The draft EIS/EIR documents the direct, indirect, and cumulative effects to the physical, biological, and socioeconomic environment that may result from various resource management alternatives at Millerton Lake.

The Millerton Lake draft EIS/EIR evaluates the existing resource management of Millerton Lake. The project purpose consists of: (1) Identifying the current and most appropriate future uses of land and water resources within the Plan Area; (2) identifying the long-term resource programs and implementation guidelines to manage and develop recreation, natural, and cultural resources; and (3) developing strategies and approaches to protect and preserve the natural, recreational, aesthetic, and cultural resources.

Millerton Lake is an existing reservoir formed by Friant Dam, and located in Fresno and Madera Counties, CA. The dam, which regulates the normal flow of the San Joaquin River and stores floodwaters for irrigation diversion into the Friant-Kern and Madera Canals, was completed in 1947. Millerton Lake has a storage capacity of 520,500 acre-feet

and a surface area of 4,900 acres. Through agreements with Reclamation and the California Department of Fish and Game, the CDPR manages the entire Plan Area.

The most recent General Plan for the Plan Area was completed by CDPR in 1983, and projected recreation trends and deficiencies through 1990. Since the adoption of this plan, several changes to the physical and regulatory environment have resulted in the need for an updated plan. The new joint Resource Management Plan/General Plan (RMP/GP) will have a planning horizon through the year 2035.

The new plan will: (1) Enhance natural resources and recreational opportunities without interrupting reservoir operations; (2) provide recreational opportunities to meet the demands of a growing, diverse population; (3) ensure recreational diversity and quality; (4) protect natural, cultural, and recreational sources while providing resource education opportunities and stewardship; and (5) provide updated management for establishing a new management agreement with the State of California.

The draft EIS/EIR outlines the formulation and evaluation of alternatives designed to address these issues through a representation of the varied interests at the Plan Area. The No Action Alternative would result in the continuation of current management practices. Action Alternative 1 (Recreation Expansion) emphasizes expanded recreation opportunities and includes additional campsites. Action Alternative 2 (Enhancement) balances natural and cultural resource protection and recreation opportunities. Action Alternative 3 (Resource Protection) emphasizes resource protection and limits some recreation opportunities.

The draft EIS/EIR has been developed within the authorities provided by Congress through the Reclamation Recreation Management Act of 1992 (Pub. L. 102-575, Title 28, 16 U.S.C. 460L) and other applicable agency and U.S. Department of Interior policies.
