### Federal Energy Regulatory Commission

[Docket Nos. CP00-61-000, CP00-62-000, CP00-63-000, CP00-65-000]

#### Central New York Oil and Gas Company, LLC and Tennessee Gas Pipeline Company; Notice of Availability of the Environmental Assessment for the Proposed Stagecoach Storage and Expansion Projects

September 15, 2000.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared an environmental assessment (EA) on the natural gas storage and pipeline facilities proposed by Central New York Oil and Gas Company, LLC (CNYOG) and Tennessee Gas Pipeline Company (Tennessee) in the above-referenced dockets.

The EA was proposed to satisfy the requirements of the National Environmental Policy Act. The staff concludes that approval of the proposed projects, with appropriate mitigating measures, would not constitute a major Federal action significantly affecting the quality of the human environment.

The EA assesses the potential environmental effects of the construction and operation of CNYOG's proposed underground gas storage facilities and Tennessee's related pipeline facilities. CNYOG's proposed Stagecoach Storage Project would include:

- Up to 26 storage injection/withdrawal wells;
- A 25,000-horsepower (hp) electrically-driven compressor station (Central Compression Facility) with gas cleaning and dehydration equipment, regulating facilities, pig launchers and receivers, miscellaneous valves and regulators, and control equipment;
- A total of about 10 miles of 8-, 12-, 16-, and 20-inch-diameter gathering pipeline;

- 14 meter stations and isolating valves along the gathering pipeline system; and

- About 2 miles of access roads not contained within pipeline or well site easements.

The Stagecoach Storage Project also includes a 4.7-mile-long, 12-inch-diameter pipeline (Twin Tier Lateral) from the Central Compressor Facility to a nonjurisdictional electric generating facility (Twin Tier Power Plant); and 1.5-mile-long nonjurisdictional 115 (kilovolt) kV electric transmission line that would extend from the Central Compression Facility to a point of interconnection with a 115 kV transmission line owned by the New York State Electric & Gas Corporation.

Tennessee's proposed Stagecoach Expansion Project would include:

- About 23.7 miles of 30-inch-diameter pipeline (Stagecoach Lateral) extending from an interconnection with Tennessee's mainline system in Bradford County, Pennsylvania to an interconnect with CNYOG's Stagecoach Storage Project in Tioga County, New York;

- A new bi-directional meter station, capable of handling 500,000 dekatherms (Dth) per day, at the northern end of the Stagecoach Lateral;

- About 3.9 miles of 30-inch-diameter loop<sup>1</sup> on its 300-Line in Susquehanna County, Pennsylvania;

- A new 14,550-hp Solar Mars gas turbine centrifugal compressor station near the Tennessee Mainline Valve 323-1 in Pike County, Pennsylvania;

- About 6.5 miles of 24-inch-diameter pipeline to replace various sections along the 300-Line in Pennsylvania and New Jersey as a result of increasing the maximum allowable operating pressure (MAOP) of 74.1 miles of pipeline on the 300-Line; and

- Modifications and/or upgrades at 10 existing meter stations and 3 mainline valves at various locations along the 300-Line to accommodate the MAOP increase.

The Stagecoach Storage Project would have a working gas capacity of up to 13.6 billion cubic feet (Bcf), with the capability of withdrawals of as much as 500 million cubic feet per day (MMcf/d) and injections of as much as 250 MMcf/d. Tennessee's proposed Stagecoach Expansion Project would expand its existing 300-Line to transport an additional 90,000 Dth per day of natural gas to accommodate additional firm transportation service.

<sup>1</sup> A loop is a segment of pipeline that is installed adjacent to an existing pipeline and connected to it on both ends. The loop allows more gas to be moved through the pipeline system.
