

(2) Unauthorized release and exploitation of sensitive propulsion system information would adversely impact U.S. technology advantages. Acquisition of production data by a potential enemy could enhance their capability to design and produce gas turbine propulsion systems with application to land and air vehicles.

d. Night Vision Forward Looking Infra Red (FLIR):

(1) First Generation (GEN) FLIR can be used for target acquisition such as Infra Red missile target acquisitions or air defense. It is classified as Confidential.

(2) First GEN FLIR is a fairly mature technology and this capability can be obtained in the marketplace. The First GEN FLIR has been previously sold to Egypt as a part of the M1A1 Abrams Tank Coproduction program.

e. Compartmentation:

(1) A major survivability feature of the Abrams Tank is the compartmentation of fuel and ammunition. Compartmentation is the positive separation of the crew and critical components from combustible materials. In the event that the fuel or ammunition is ignited or deteriorated by an incoming threat round, the crew is fully protected by the compartmentation. Sensitive information includes the performance of the ammunition compartments as well as the compartment design parameters.

(2) The U.S. Army has invested millions of dollars in the design, development, and integration of compartmentation in the Abrams Tank. Although the concept of compartmentation is not new and design principles are known, the U.S. currently has the advantage in the design and integration of compartmentation into combat vehicles. The design of the compartments cannot be protected. However, the guidelines, parametric inductions, and test data used to develop the compartments do not have to be disclosed to permit a sale.

2. This proposed sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification. Moreover, the benefits to be derived from this proposed sale, as outlined in the Policy Justification, outweigh the potential damage that could result if the sensitive technology were revealed to unauthorized persons.
