

clarifications were made to the final CCP where we determined it would be appropriate.

#### Selected Alternative

After considering the comments we received, we have selected Alternative 2 for implementation. By implementing Alternative 2, we will protect, maintain, and, where feasible, restore habitat for dusky Canada geese, other waterfowl, and imperiled species. We will maintain high-quality green forage in pastures and wet meadows, and increase cropland and wet meadow acreage. Wetlands will be managed to increase productivity and reduce pumping costs. Invasive species and noxious weeds will continue to be a primary management concern. Enhancing and restoring bottomland forest and oak woodland habitats will increase. We will complete habitat assessments to guide stream and tidally influenced wetland restorations. We will conduct feasibility studies for reintroducing native species such as Columbian white-tailed deer and western pond turtle, and inventory and monitoring efforts will increase.

Current public use areas and closures will continue, the waterfowl hunt area will remain unchanged, and changes in wetland management will improve the hunt program over time. A new access point to the River 'S' Unit will be developed. The existing auto tour route will be open year round, and shortened slightly, to provide habitat for dusky Canada geese and cranes. A new dike-top walking trail will be constructed. Environmental and cultural education and interpretation programs will increase.
