I. Background

A. Description of a SIP

Each State has a SIP containing the control measures and strategies to attain and maintain the National Ambient Air Quality Standards (NAAQS). The SIP is extensive, containing such elements as air pollution control regulations, emission inventories, monitoring networks, attainment demonstrations, and enforcement mechanisms.

B. How EPA Enforces SIPs

Before formally adopting required control measures and strategies, each State must provide the public with an opportunity to comment on them. The States then submit them to EPA as requested SIP revisions on which EPA must formally act.

If and when these control measures and strategies are approved by EPA, after notice and comment rulemaking, they are incorporated into the Federally approved SIP and identified in title 40 of the Code of Federal Regulations, part 52 (Approval and Promulgation of Implementation Plans) (40 CFR part 52). The actual State regulations approved by EPA are not reproduced in their entirety in 40 CFR part 52, but are “incorporated by reference,” which means that EPA has approved a given State regulation with a specific effective date. This format allows both EPA and the public to know which measures are contained in a given SIP and to help determine whether the State is enforcing the regulations.
