SUPPLEMENTARY INFORMATION:**Background**

In 1979, Congress initiated the Yakima River Basin Water Enhancement Project (YRBWEP) in response to long-standing water resource problems in the basin. The YRBWEP was charged with developing a plan to achieve four objectives: (1) Provide supplemental water for presently irrigated lands; (2) provide water for new lands within the Yakima Indian Reservation; (3) provide water for increased instream flows for aquatic life; and (4) identify a comprehensive approach for efficient management of basin water supplies.

Initial efforts in the mid-1980s (Phase 1) focused on improving fish passage by rebuilding fish ladders and constructing fish screens at existing diversions. Phase 2 in the 1990s focused on water conservation/water acquisition activities, tributary fish screens, and long-term management needs. Efforts under these initial phases were hindered by the ongoing uncertainties associated with adjudication of the basin surface waters that began in 1978. With the adjudication process now largely completed, most of these water right uncertainties have been addressed.

In 2003, Reclamation and Ecology initiated the Yakima River Basin Water Storage Feasibility Study to examine storage augmentation in the Yakima River basin. This study emphasized evaluation of a proposed Black Rock Reservoir, which was the focus of the Yakima River Basin Water Storage Feasibility Study Draft Planning Report/Environmental Impact Statement (PR/EIS) issued in January 2008.

The narrow focus of the legislative authorization in combination with comments on the Draft PR/EIS prompted Ecology to separate from the National Environmental Policy Act (NEPA) process. In mid-2008, Ecology initiated a separate evaluation of the Yakima basin's water supply problems, including consideration of habitat and fish passage needs. Reclamation continued the NEPA process consistent with its legislative authorization and issued the Yakima River Basin Water Storage Feasibility Study Final PR/EIS in December 2008. Following issuance of the Final PR/EIS, Reclamation selected the No Action Alternative. Ecology completed its study and issued a separate Final Environmental Impact Statement (FEIS) for the Yakima River Basin Integrated Water Resource Management Alternative in June 2009 under SEPA.

The Integrated Water Resource Management Alternative evaluated in the Ecology FEIS relies upon a range of water management and habitat improvement approaches comprised of seven major elements to resolve the long-standing water resource problems in the basin. Elements of the Integrated Water Resource Management Plan that will be analyzed in the Programmatic EIS include, but are not limited to:

1. Fish Passage (fish passage improvements at Cle Elum, Bumping, Clear Lake, Keechelus, Kachess, and Tieton Dams);
2. Structural/Operational Changes (subordination of power generation at Roza and Chandler Power Plants);
