

endangered species found on the refuge include wood storks, flatwoods salamanders, and American alligators. Refuge management activities primarily focus on habitat management for marsh and wading birds, endangered wood storks, waterfowl, and resident wildlife, along with wildlife-dependent public recreation. Fishing is allowed in the tidal creek and piers have been constructed for public use. Deer hunting is allowed during fall and winter.

Blackbeard Island Refuge was acquired in 1800 by the Navy Department and was established as a national wildlife refuge in 1940. Situated off the Georgia coast and accessible by boat only, Blackbeard Island Refuge is comprised of 5,618 acres of maritime forest, salt marsh, freshwater marsh, and beach habitat, with 3,000 acres designated as Wilderness. These areas provide nesting and feeding areas for threatened loggerhead and leatherback sea turtles and American alligators; endangered piping plovers and wood storks; and species such as shorebirds, gulls, and terns. Refuge management activities focus on habitat monitoring and protection, along with wildlife-dependent public use opportunities and environmental education. Saltwater fishing is allowed. Two archery hunts for deer are scheduled during fall and winter.
