Proposed Project

*The AHRQ Safety Program for
Healthcare Associated Infection
Prevention*

Healthcare-associated infections (HAIs) are a major cause of illness in the U.S., affecting one out of every 31 hospital inpatients (3% of all hospitalized patients) daily and resulting in as many as 700,000 infections per year. Some of the most predominant HAIs include catheter-associated urinary tract infections (CAUTI), central line-associated blood stream infections (CLABSI), and ventilator-associated pneumonia and ventilator-associated events (VAP/VAE). The current estimated incidence in hospitalized patients is approximately 27,000 CAUTI cases annually and 30,000 CLABSI cases annually. VAE cases affect between 5–40% of patients requiring mechanical ventilator support for more than two days. VAE cases are considered the deadliest HAI, with all-cause mortality rates associated with VAE as high as 50% and a direct attributable mortality rate of 9%.

To help hospitals reduce HAIs, AHRQ created the Comprehensive Unit-based Safety Program (CUSP). CUSP is designed to engage clinical teams to make healthcare safer by combining
