

Abstract: Serious assaults on law enforcement in the United States are a growing problem, with both assaults with injury and felonious killings of law enforcement officers trending upward (FBI, 2022). While the Law Enforcement Officers Killed and Assaulted (LEOKA) data collection answers many questions related to these assaults and deaths, such as the who, what, when, where, and how, the data does not answer why these assaults are happening. Without knowing and understanding why these assaults are happening, we cannot begin to prevent them. Outside of the previous studies conducted by the FBI, there is a lack of research into this question of why offenders assault police officers. In particular, there is a lack of research that looks at both the officer and the offender in such incidents, and how the relationship between the two impacts the assault.

The purposes of this qualitative study are to examine the possibility of predicting assaults on officers and to use this information to prevent future assaults. To date, very few studies outside of the FBI's Officer Safety Awareness Training (OSAT) research projects, have looked at these assaults from the perspectives of both the officer and the offender. By interviewing officers and offenders, this study seeks to gain a more thorough understanding of why these incidents take place, and the context surrounding them. Based on the recent trends and the modicum of previous research, it is expected the

current study would make a large contribution to what is currently known about these attacks, and would play a substantial role in the preparedness, prevention, and mitigation of these incidents by informing those who develop training and operational practices.

This mixed method research effort will use the Perpetrator-Motive Research Design (PMRD). PMRD is a 12-step methodological design that focuses on gaining a thorough understanding of the motivations of offenders. Interviewing incarcerated offenders allows for increased accessibility, increased sample size, interviewer security, and avoidance of ethical or potential legal entanglements which interviewers might be exposed to while questioning offenders still at large or whose cases have not yet exhausted the criminal legal process. Because PMRD is suited to identify and understand offender motives, the findings can be used in the development of training interventions for law enforcement officials which could improve officer safety. As part of the study, researchers will also seek to examine the incident reports associated with the assaults and the FBI criminal history record information of offenders. Researchers will also seek to obtain, examine, and use any body-worn camera or dashboard camera recordings associated with the assaults for research and training purposes.

SUPPLEMENTARY INFORMATION:

I. Background

The July 2024 CPS Disability Supplement will be conducted at the request of the Department of Labor's Chief Evaluation Office. The Disability Supplement will provide information on the labor force participation rates for people with disabilities and those experiencing work-limiting health conditions or difficulties; the health conditions or difficulties they face; barriers to employment; challenges that make it difficult to perform their jobs; and job-related accommodations.

Since the supplement was last collected in 2021, work patterns have changed, policies have changed, and assistive technologies have advanced. In the 2024 iteration of the Disability Supplement, a number of questions will be added and others will be dropped, and overall there is no additional burden on the respondents.

New questions are being added to identify individuals with health conditions or difficulties that limit their ability to work, to complement data collected by the six disability questions currently included in the basic CPS, which ask a series of yes or no questions about whether a person:
