

### Conclusions

Kaiser has committed to perform remediation activities in accordance with an acceptable DP. NRC staff believes the DP provides adequate controls to keep potential doses to workers and the public from direct exposure, airborne material, and released effluents, ALARA.

NRC staff also believes that the remediation alternative proposed by Kaiser minimizes the potential dose to members of the public, and other environmental impacts. Potential doses to members of the public will be minimized by removing contaminated soil from Kaiser property and making the site suitable for unrestricted release. The proposed remediation alternative also minimizes the potential environmental impacts. Kaiser will excavate and dispose of soil with Th-232 concentrations greater than 1151 mBq/g (31.1 pCi/g), thereby removing a significant source of contamination from the local environment. Therefore, the potential environmental impact from the proposed action is insignificant.

### III. Finding of No Significant Impact

Pursuant to 10 CFR part 51, NRC has prepared this EA related to the approval of Kaiser's DP. On the basis of this EA, NRC staff has concluded that there are no significant environmental impacts on the quality of the human environment. Accordingly, the staff has determined that preparation of an Environmental Impact Statement is not warranted.
